THE FIRST PART OF

THIS BOKETREATETH OF THE abinges that are brought from the Occidental Indias, which ferue for the vie of Medicine, and of the order that must be kept in taking the roote called Mechoacan, wherein are discourred great fecretes of Nature, and great experiences: made and compiled by Do.

Elor Monardus , Philition of Seuill.

In the pere of our Load God, a thoulad, foure hundreth ninetie two, our sepanjards were governed by it Chiftopher Colo, being naturally boan in the colitrie of Genoma, to bilcotier the Decident India, that are called at this day, the news imply, and there of, the pilovered the first land thereof, the piloay of

Detober, of the laiv pere: 4 from that time unto this, they bave viscouered many a simbly Alambes, and muche firme land, as well in that colitrie, which they call the new Spaine, as in that which is called the Pern, where there are manie Provinces, many Kingdomes, and many Cities, that have contrary and vivers entlowes in them, in which there have beene founde out, thinges that never in these partes, nor in any other partes of the worlde hate beene seene, nor butto this day knowen; and other thinges which nowe are brought unto be in greate abundance, that is to say, Golv. Sultur, Pearles, Emeraldes, Eurkeies, 4 other fine somes of great value. Pet great is the excelle and quantitie that both come, and every base boeth come, and inespecially of Golve and Hiller, that it is a thing woorthy of admiration

The first part of the thinges that

on the great number of Pcions, which have come from thence, belives the great quantity of pearles which have from ero the whole world: also they boe bying from those partes, Popingaies, Orifions, Apes, Lions, Gerfaucons, 4 other kinds of Daukes, Tigers wool, Cotton wool, Graine to bie coloures with al, Pubes, Sugars, Coppar, Ppafil, the wood Ebano Anili: and of all these, there is so great quantity, that there commeth every peere, one hundred thips laben there with, that it is a great thing, and an increoible riches.

Medicines shat our Oceidentall İndias doe fend vs. And belides these great riches, our Occidentall Indias doe send but to be many Crees, Plants, Pearles, Rootes, Juices, Gummes, Fruites, Licoures & Stones that are of great medicinall bertues, in the which there be sounde, and have been sound in them, deep great effectes that doe exceede much in value and price all the asoperands thinges, by so muche as the corporall bealth is more excellent, and necessary then the temporall goodes the which thinges all the world both lacke, the want whereof is not a little burterfull, according to the greate profite which were doe see, by the vie of them to soldiow, not onely in our Spayne, but also in all the world.

Anflate.

Ano this is not too bee meruelled at, that it is so, so, the Philosopher doeth sap, that all Councries doe not present Plantes and Fruites alike: so, one Region persent such Fruites, Erees, and Plantes as another doeth not: were doe see that in Cresa onely groweth the Dipramo, and the Incence onely in the region of Saba, and the Assacigationally in the Islands of Chio, and the Binamom, Clours, and Peper, and other spices onely in the Islands of the Malica, and many other thinges pour have in divers parties of the anolde, which were not known but linear parties of the people of olde time bid lacke them, but Time which is the discoverer of all thinges, but discovered them but does greatly to our profile, considering the greate needs that were had of them.

are brought from the West Indias Fol. 2.

And as there are biscourred new regions, newe king. The discome. baue bjought buto be neme Peticines, and neme Reme. 7 of the Inties , wherewich they boe cure many infirmities, which, if diat. toe bib lacke them, moulde bes incurable, and without anne remeby : of which thinges although that fome baue knothlever , per they be not common too all people , for which caule I vio pretent to treate, and to write, of all things that they bring from our Indias , apperteyning to the arte and vie of Bevicine, and the remedie of the huttes and bileales that wee por fuffer and enbure, inhereof no imall profite bacth follows to thole of our time, and allo bacoo them that thall come after bs: in the betmaping whereof I thall be the Ort, that the rather the followers may abbe bereinto, with this beginning, that which they that more knowe, and by experience bereafter fine out-

Am as inthis Citie of Semil, which is the Bonte and (kale of all the Occivencell Indias , we boe knowe of them more , then in amp other partes of all Spapne , for bicaufe that althings come first hither, where by better intelligence and greater experience it is learned; fo boe I, with macrice and ble of them this fourtie peeres , that which I boe cure in this Citie, where I have informet my feile of them . that have brought thefe chinges out of thofe partes with muche care , and Thane mabe experience thereof, with many and Diners perfons, with all biligence and forelight pollible, and

with much happy fucceffe.

Of the Anime and Copall.

Dep bo bring from the new Sepaine 2. kinds of Ro- Ofibe Copal. fine, that be both much atthe one to the other , the one is cailed Copall, and the other Anime. The Copalits a Rofine berie white, and of muche brightnelle, it is brought

The first parte of the thinges that

brought in certaine great peeces , which are like too peeces of Diaentron bety cleare, it bath an inbifferent fmell . but not fo good as the Amme: with this Copall, the Indiand bib make perfumes in their facrifices, a fo the ble there. of was frequented in the Temples, by their Pielles.

Hillorie .

and when the first Sopantarbes went too thole partes, the Witeltes ment out to receive them , with little firepots. burning in them this Copall, and gening to them the fmoke of it at their notes : wer boe ble heere to perfume with it in bifeales riling byon colbeneffe of the beat, in the place of Incence, on Anime: it is botte in the leconde begree , and mopil in the firit . it is relokuatine, and lofineth by lome matriff partes, that it bath.

What Aminue is .

The Anime is a gumme or Rollne of a greate Cree . it is white, it braweth neere to the coulour of Incence, it is more oply then the Copallis, it commeth in graines, as the Incence boeth , although fomewhat greater, and beyng brohen, it bath a pellame collour, as Roline bath : it is of a bery acceptable and pleafaunt fmell, and put bypon burning

coales, it both confirme bery quickely.

Howit diferesb from OWTS. Ofthe con-

It Differeth from our Amme, that is brought from Lenante, which is not lo white, nor fo bright, infomuche that fome boe fap, that it is fpice of Charabe on Succino. which is called amber congeled, wherwith they boe make Beabes, but it is not lo, for that the Charabe is a kinde of geled amber. Bitche, that is founte in the Germayne Gea, ant it is tahen out of the Sea in great peeces , with a magge of Iron. lo that it feemeth to come foorth of fome Fountaines, into the Dea, after the maner of pitch, and beeing come foorthe bnto the colbe apre, it congeleth, for because there is liene in the fame, peeces of flickes, & other fuperfluities of the Gea. cleaning buto it, and in this they thall fee the errour of them, that fay that it is @umme of Alamo and of others, that it is of the Binettee.

Hermy Ave.

Df our Anime Hermolaus Barbarus, a man moft ercel lencly

Of the Bitume which is a kind of pitch, theref.

Dere is in the Illame of Cuba,certaine Bitumen, fountaines at the wea fine, that bo caft from them a kinde of blacke prech of a frong fmell, which the Antiana bee ble in their colo infirmities. Dur people boe Z ble it there to pieche theps Chippes withall , for it is well neere lyke buta

Carre, and they boe mingle therewith Callowe, to make it lottet the better. I boe beleene that this is Napea, which Napea. the aumetent unpeers voe fpeake of . Pofridone lapeth , that there are twoo fountapnes thereof in Babylon, one mbpte and the other blacke.

Chat which is bjought tro the Indias, we bo ble againt The vertues.

griefes

The first parte of the things that

griefes of the Pother, for that it boeth reduce the Pother to ber place. And if it rife on high, then put it to the Potherhylles, and if it come bowne to the lower partes, putting thereto a westent with this Pieche, it causeth it to go by wards, to ber place and likewise it boeth profite, being applied to cold Infirmities, as the other Pedicines do which we have spoken of. It is botte in the second degree, a most in the first.

Of liquid Amber, & the Oyle therof.

Rom the newe Spaine they bee bying a Roline that

De sall Liquid Amber, and one like Ople that wee call
De sal Liquid Amber, that is to lay, a thing that wee
doe mail lithe, and as precious as Amber, or Ople
theteol, both of them being affineeze linell y of good lander,
and especially the Ople of Liquid Amber, which is of law
uour more delicate and live et than Amber, a Rollne taken
out by incilion from certains trees very great and faire, and
full of leaves, which are like to Jule, and the Indians voe
rall them Ococol. They carrie a thicke timbe, of the colour
of Ahes, this sinde being cut, both cast out the Liquid Amber thicke, and so they be gather it, and because the rince
bath a smell bery live te, they do breake and mingle it with
the Rollne, and when it is butned, it bath a better smell, in
so much, where soever the trees are, there is a most sweets
smell through all the fields.

Hiftorie.

Withen the Spantaroes came the first time, to that place where it groweth, and sin feele such a sweete smell, they thought that there had beene spices, and trees thereof.

The vicofit.

Chare to broughe much quanticie of Liquid Amber in to Spaine, info much chareter bo bring many Pipes, and Barelles full thereof to fell for Perchambile, for heere they take producthereof, to perfume in thinges of imeter function.

are brought from the West Indias Fol.7.

Gnelles , walting it in place of Searax , for that the fmoke and freit boeth ferme to be the fame; and alfo they boe put it into other confections of freete finelles to burne, and fuche like thinges. It caffeth from it fo muche finell wichout bur. ning of it. that whereforner it be , it cannot be bibten , but both penetrate many boules and ffreetes with the Imcete

frell, when there is quantity of it.

Referueth much in medicine, a both therein greate effect, 7 be worker for that it bealeth, comforteth , biffolueth , and mittigateth payne applied buto the Poulbe of the beabes by it leife, og and effelles mingled with other thinges Aromaticall , it both comfort of #. the braines, and taketh away the paines of any mannet of gricle , proceeding of a coulde cause layed after the manner of a Plapiter therebato , it borth allo mittigate, and take a way the papies , & griefes of the flomake, wherein it both a maruetlous effect, applied after the maner of a Scomacher. For that it both comfort the Stomake, and boeth bilfolue windes, and helpe digeftion, and take away ramnelle lons plasfer. it cauleth the mease to be well bigeffen, it geneth luft to eater itis made of Laquide Amber, [preate abroade bpon a feeps Chinne , in the forme of a breaftplace , ming led wich a little Storax, Amber and Mufke, it is a Blapter mbich boeth mofite muche in all that I baue fageb. Chere is knowne of this plapfter berp great experience , in this Citie , for the groon effect that it worketh: it is bot in the ende of the fecond begree, and moyff in the firft.

Dut of this Liquid Amber,is taken the Dyle that is cal led the ople of Liquide Amber, the which in his finel is more Of the Oyle fweet,it is taken out of the Liquide Amber whentt is newly of Liquide gathereb, putting it in parte where it may billil of it felle, Amber, and the more fubrill) is the perfectell and hell of all bow at it take.

(the more lubrill) is the perfecteft and beft of all.

Debers there be that bo preffe it, becaufe the more quantitle thereof map be taken out, they bring it for merchaun-Dife, for that they ble to brefle Bloues therwith for the common people, and in this trade there is much frent.

The first parte of the thinges that

The ofe of it

It is viev in Pevicine to many vileales, and it is of greate betwee to heale colve vileales, to it healeth excellently well al parter whereforeser it be applied, it distinct and mollifleth any maner of barbnes, taking away the paynes the viliolizeth the harveste of the Pother, and openeth the opilations thereof. It provoketh the Ponethly course in women, and it maketh folt any maner of hard shing. It is hotte welneser in the third degree.

Note .

And it is to be noted, that many boe bying this Sierae bery thin from the Indias, which is not lo good, in because that they make it of the bowes of the trees, cut in perces, and forden, and they gather the fatnes that I winnineth byome and the Indians boe fell the busies of the trees inhereout the Liquid Amber is taken, made in hambialtes, a boe fell it in their market places, so to put among it their clothes, which raused them to finell, as of the water of Angels, a so, this purpose the Spaniards boe ble it.

Of the Balfamo.

They boe thing from the new Spayne that licour most excellent, which so his excellence and meruelious effectes, is ralled Ballamo, an imitation of the true Ballamo, that was in the land of Egypt, and so that it doeth such great workes, and remedie so many instructions, there was genen to it such a name. It is made of a tree greater than a Powngarnet Cree, it carrieth leaves tike to Nettles: the Indians doe call it Xilo, and we doe call the same Ballamo. It is made two maner of wates, the one is by the way of incision, cutting the rynd of the Cree, which is thinne, gening many small cuttinges, out of the which there commeth a clammich licour, of colour white, but it is little and made excellent, and very perfect. The other saftion is, whereby the Indians doe die wo take out licour of the

are brought from the West Indias. Fol.8.

the trees, which is a common ble among it them is this they take the bothes and the great peeces of the trees, and make them as fmall, as they can, and then caft them into a greate kettle . mith a good quantity of mater, a lo boyle them butill they fee it fufficiently bone, and aftermarbe they let it coole, and gather by the ople that boeth fwimme therebypon with certaine fielles, and that is the Ballamo that commeth too thele partes, and that commonly is bled : the colour therof is Alborne which is likened to blacke, it is of most freet finel, and bery excellent. It is not concenient, not it ought to bee hept in am other beilel then in liluer, (Glaffe og Cinne, og a. my other thing glaffed, it booth penitrace and booth paffe though :) the ble thereof is onely in thinges apperteining to Debicine, and it hach been blet of long time, well neers fince the new Spaine we bilcouered, for that incontinent the Spaniarbes bab knowlebge of it, because they bib beale theretoich the mountes that they bib receive of the Indians, being abuiled of the berme thereof by the fame Indians, and they bip fee the faibe Indians beale and cure themfelues therewith.

Wiben it firft came into Spayne, it was effcemet as The effime. wuch as it was reason it thouse be, for that they bit lee it tien that it is make meruellous woonkes, one ownce was woonth tenne had m. Duccates and botharbes, and note it is better cheape : the first time that they carried it to Rome, it came to be woorth one ounce , one hundreth Duccats: after that they brought to much and fuch great quantity, that it is nowe of fimali batoe : this commeth of the abundance of thinges . And when it was bery beere all men sooks molite of the molte of it, and fince it came to bee of lo lowe a Price , it is not lo Note. muche elleemen beepner the file fame Balfame , that it mes then when it was month one bundgeth Duccates the ounce . Surely if the Indias bad not beene bifcouered, but onely for the effects, to fend bs this meruellous Note. licour, the labour had been wel employed which our Spant.

ATDES

The first part of the thinges that ares been to the Ballane that was bled to be

bab in Egypt, it is many perres fince it fatten, because the Eline from whence it came, bileb bp, wherby you have now none in the morloe. Dur Lope Gob bib thinke it good in place of that to gene by this Balfame, of the newe Spapne, the which in my tungement in Medicinal bertue, is no whit inferiour buto that of Cappt, accopbing to the great effects that we bee fee in it, and the great profite that it boeth, which the boe fee in Speniemes, in thee mapes : that is to fap, it is taken at the mouth, opic is applied outwardly, of it ferneth in thinges of Surgery. Caken in the mojuing faffing, it bealeth the thortneffe of breath : it taketh away the bileales of the blavver: it prouoketh the Wentimes of Comen taken and applied with a Beffary: it taketh away the olde paynes of the flomake licking certay ne Doppes thereof in the mos ning falling, lapte upon the palme of the bante, and fo continued : it boeth comforte the formake : It both rectify the Liner : it maketh a good colour in the face, it maketh a good breathing, it openeth the Bheaft, it biboeth opilations, and conferneth pouth . I know a person of much estimation that bit ble it, and beeping of great peeres, bil looke like a young man, and lines after be bles it without occasion of any cuilf. They which have beene croubles with a by cough have be feb it, and to fome it bach beene profitable, aub fome Bentletsomen that have not brought foorth Chilbren , baue bfeb it in tentes for too purge the Wocher, and it bath bone them good.

It healeth all manner of runsinges of Returnes, is biffolineth Optiations and bealeth the Dieplie. Te maketh a good colour in the face , it taketh a male the Nambles, and all cull complexion of the Liner a rectifieth it, and in this it bath a greate merogatine. Gin bp this memes thefe infirmities are bealen. It bealeth the Patley o all infirmities of the winewes, it healeth all vilcales of Chrine, it taketh atmay Welancholy , and all infirmities comming of coine vileales. It both comfort the flomake, it both biffilm winder meruelloufly, and alfo Agues long and harp, as quotivians:the taking of this water as it is comenient, fo both it rocce them out, and take them away. The labich thing it booth by protoking of freet, in this it both erceebe all other Westeines, and fome will fay that in Defilent Agues, by prombking fweat it bealeth them. It is byp in the fecomo negree mith very lide bente, the which is feene The compleby the other waters of the wood, and as Sarcaparillia which xion thereof. both heate and bate , fa this both not, not leaveth any impreffion of beate.

Quelp it is a notable Webicine, in the which I bant Note. founde greace effectes for the Difeales which I bane fpo. hen of.

Of

The first part of the thinges that Of the Sarcaparillia.

The trme fince that the Sarcapillia. came unto

be Serceparillia is a thing brought into our pertes fince the Chana. It is tr. peetes lince thebe ble thereof came to this city. It firft came fro de new Spaine, e che Indians bib ble it for great medicine. with the which they bid beale many and diners bileales.

The descripsion of the Sarcaparillia

It is a plant which both caft many rootes bober the ground, being of a yeard long, a of the colour of a cleave Catony, a fometimes the rootes fhoote fo beene that to take them out all, it is need full to big a Spans length. It calleth footh certaine bomes full of knottes, chat quickly bo byte, and we know not that they have carried flow ers or fruite at all.

duras.

After that the Sacaparillia of the news Spappe was Sarcaparillia founde there was also found in the Hunduras, an other lost of the Hun- that was better, and of better effectes it is knowne to be of the Hunduras, becamfethat it is of colour Catunie, and groß fer than that of the netwe shpayne, the which is white, and fomewhat like to yellowe; and more fmall, and fo the Sacaparillia that is most like to blacke is belt.

The chooling ofst.

It ought to be freibe, and in this is all the mootnes there of, it is knowne to be frefb by not beyng Come eaten. for that at the frethe breaking of it long wife, in the mitbett it. maketh a running out to the entrant caffeth out no buff, and the beauter ic is, the better it is.

Che Spaniardes Dit callit Sarcaparillia toben they lato Of the name. It, for the great likenes that it hath with the Sareaparillia of thele partes. I have it for certapne, that the Sarcaparillia of thele partes, and of the Indias, is all one, and the berie Came that ours is. The which I baue erperimented mamie times, & ours worketh the effect that the Sarcaparillia of the

are brought from the West Indias Fol. 6.

neh Spaine Doth, tit is like bute that of the Handuras, but it is of a bitter toft, and not bery farpe, and the water that it peelbeth bath no more fauour then barlep mater bath.

The ble of this bearbe at the first Did Duffer muche from How it was that which is now in experiment, for that they gave it as the v fed in the Indians bib,in the bealing of their liche folhes and furelvit beginning. bib morks bery great effects. But the belicateneffe of our time both require that it (bould be bled and genen as the mater of the wood is. At the beginning they took of the Sarcaparilla much quantitie,more then hatte a pounde, o bio cut it finall and breake ic, and call ici nes a quancicie of water, and being well met they beate it in a Boster a good while, in fliebe forte that it was made like a Fellie, and then bib fraine it, preffing it bery well, for there came out of it the likeneffe of a thicke brinke. And of that they tooke in the mouning bot, one good Cup full, and then the Bacient clo. theb him felle well. And Iweete clas boures, and if in the day time they monto e brinkeanp thing it thould bee of the felfe fathe thicke britike, fo made by expression has, and then they frete as much in the mounting. This opper they observed for three Dayes continually, without eating or brinking of other meate, lauting onelp that thicke brinke, taken out by prelling Take this for of fraining of the Sweapardia: a after this lost I gane it three duesat the beginning many times ; and firely it wought give at effects and many licke people bin better recourt, then they boe notice with this other fallion.

After there was invented an other forme and manner to gene it, and is that which is now blev, in this lose . They take two ouncesof Sarraparilla, and wall it and cut it fmail and then they puele into a netwe earthen par, and thereby. pon they poure thee Pottets of water, and fette trin the mater to fleene twentte and foure houres, and after the Bot being well ftopre, it muft feeth on a loft fire of hinbled coales, butiliche imo Bottels bee fode en away , and

The vie of the which ment to well with them, that all they being bealed the friers oid lend relation of this, to the father provincial to Mexico wher he was, who bid comumicate it with those of the countrie, gening to the of the roote and comforting them that they foulbe take it, because of the good relation, that ber bab from thole Friers of Mechancan. The which beyng viet of many, and feeyng the meruellous woorkes that it bib, the fame of it mas extended all abroad fo that in Bost time, all the Country was full of the good worke sand effectes thereof, benithing the ble of Rufbarbe of Barberie, and taking the name thereof calling it Raibarbo of the Indias as all men doe nom commonly call it. And allo it is called Atochoncon, for that it is brought from thence, o gatheren in the Brouince callen Mechanen, Ant not onely in Mexico, and in that Countrie it both take it ad the most excellent-purgation, and best of all other, but also in Peru, and in all other partes of the Endias, they ble me otherthing , neyther purge they with any other purge, and they take it with fo much trut and eafineffe, that when thep take it, they thinke to baue certaguly they bealth, & fo they carrie it from the name Sopanne, as Werchaumile of berp greatprice.

Historie.

Ruibarbe of

she Indias.

It is about thirty and foure peeres pall, when I fame it beere the first tyme, when one Pasqual Carane a Genouse, came from the news Happe , who fell sicke at his comming, and as I did cure him, at the time that I woulde purge him, be sayde to me that he brought a Ruibards from thenews Happe , that was a very excellent Pedicine, with the which all they of Mexico did purge themselves, saying, that it was called Ruibards of Mechanean, and bee had beene purged many times therewith, and it had succeeded very well with hym, and if he shoulde take any purge, he woulde take that, of the which he had experience.

Ъщ

are brought from the West Indias. Fol.25.

But I cauled bim beterly to forfake the ble of fuche like new Specicines , of the which there was nothing written nor knowne. And bib perfwabe with bim to purge with the Sebicines that we had beere, of the which there was to greate. experience and knowledge, in written Authors . And be bib graunt to my moorbes, and purged bimfelfe with a purga:i. on that I gave bim, euf as it mas convenient for bis bileale. By the which although that there bib followe unto him nota. . Die ligbenelle, and profite: pet bee was not cleare of the bil. eale in fuch fort, but that it mas neceffary to purge bim an ather time . And when the came to the fecond purgation, bee woulde take none other but his owne Ruibarbe of Mechaacar, with the which be bid purge to well, that he remarned whole, and without any buleafe. And although that this effect Dib like me well, neuertheleffe 3 bib not remaine fatiffieb. butill many other that came at the fame time, and fel ficke, bid purge with the lapbe Mecheacan, and it went berie well with them , because they were accustomen to purge therewith in the ne'me Spayne : and feeping the good works and to many thereof. I began to confiber of it, and to purge many therewith, geuing credite to the good effectes that it twought.

And fo with thefe that I bio make experience of bere, as The vie mall alfo with the relation, and great credite of them, that came parter of the out of the newe Spayne (infomuch that the ble thereof bath Mechoacas. fpread abroade, that it is a common thing in all the worlde, and they boe purge therewith not onely in the newe Spaine. and the Proutness of the Bern, but allo in our Spayne, all Italie, Almaine,and flaunders) I baue fent relation therof, well necre to all Curope, as well in Latine , as in out

natiue tonque.

The ble thereof is lo muche, that they bying it for chiefe The greate Perchaimbile, in great quantitte, and it is folde for greate quantity of funmes of monie: Infomuch that a leller of Daugges tolbe Mechoacan me, belibes that mbich be bab fold for the Citie, be bab folde that is wied. feathe

The first part of the thinges that

footh of the citie the last peere, more than ten kinealles of it, which is a thouland pound weight, so that nowe they aske for Ruthard of the Indias, for that is so familiar, that there is no hulband man that booth not ble it, as a most fure medicine, and of great effects, because for that kinde of puragation, there is no neede of a phisition, as being that, but which all men grue most credite, as a thing determined and

appropued for good.

I have talked with many of them that have come from the newe Spayne, and inespecially with them that have beene in Mechoacan, concerning the sassion of the plant that shis roote is of, and what some and figure it bath, the which they doe bying from the Countrie, within 40. leages of beyonds Mechoacan, from a countrie which is called Coloma, and they have so little care therein, stepng that their principall intent is dues they interest and gaine, that they know no more thereof, but that the Indians in Mechageau doe sell it them, the rootes beyng drie and cleane, as hither they doe bring them, and the Spaniardes doe buy them, as a kind of Derebandis, and so seem to spaine.

And lurely inthis we are moogthy of great reprehention, that leeping that there are in the newe Spapne, to manie Dearbes, and Plantes, and other thinges Pevicinable, of to much importanines, there is not any that writteth of them, not is it binderstood, what bertues and somes they have, so to accord them with oursiso that if men had a belier to learth aut, and experiment to many kinde of medicines, as the Andrians due fell in their Parket places and Kayes, it would be a thing of great profite, and vilitie to see and to knowe their properties, and to experiment the bariable and greate effectes, which the Indians due publishe, and manifest with great proofe amongest themselves, which they have of them: wee of our parte without any consideration due relike it, and suche as due knowe their effectes, will not give

are brought from the West Indias Fol. 26.

be relation, not knowledge what they are, not write the ef.

ficacie and manner of them.

And goyng too learche after the Blace of the Roote Hifferie of Mechonean, a Baffenger that was come from that 1910. the Plant of mince , Dio abuertife me that a Fraunces Frier, that was Mechoacan. come from that Countrie, bab brought in the Chippe where be came, the proper Dearbe of Mechoacan orreene, in a great barrell, and with muche care, which bee brought from beyonde Mecheacan, and that hee had igin the Frierie of S. Frances of the City. And bearing thereof I bib recepte arreace concentment, and fo I went foorthwith to the Frie. rie, and at the boose of Infirmerie, on house for the ficke people of this Frierie, there was a thing like too balle a mine, in the tubich there was an bear be very greene, which they fathe was the Mochoacan, that the Frier had brought from the new Spapne, not with lietle labour. It is an heart The deferip. that groweth creeping bp by certaine little Canes, it bath a tion of the Cappe greene colour, it carrieth certayne leanes, that the Mechacan. erreamette of them may be of the greatnette of a good 100 renge bith, which are in compatte round, with a little point, the leafe bath bis little Dienewes , it is fmall, well neere, without moviture, the flathe is of the colour of a cleere Camnie. They lay that it calleth foorth certayne Clufters mich lietle Graves, of the greatnelle of a Conianter feebe which are the fruite , and boe mage rype by the Boneth of September : it cafteth out many Bowes, which both fretche a long uppon the Carth , and if you put any thing neere to it, it goeth creeping bpon it. The Roote of the Mechanis to balauerie, and without byting, or ante The manner harpenelle oftaft. Chat which wee oce fee at this prefent of the roote. of our Mechacen, is a roote which they bying from the new Conavne, from the Prouince of Mechoacan, mabe in greate and little peeces, of them cutte in peeces, of them broken with their handes. It is a white Rooce , fomewhat ffrong,

The first parte of the thinges that

and mighty it appearesh that the peeces be of a great roote. without any beart.

The elettion of the Mechoscan.

The conditions, or elections that it mud baue, for to be good and perfect is: that it be frethe, which may be knowne if that it be not worme eaten, not blacke, and that it be fome. what white : but the very white is not fo good, and if it bee Comembat ruffet, la chat it be the bttermoft parte of the root, for that the inner parte is fomewhat white . In the talling or cheming of it, it is without favour, or any manner of byting taff.

That it be frest.

It importeth to make his worke the better if fo be that it be freibe, for that the freiber it is, the better it is, and the greater the peeces are, the better they are conferued. And it is true, that that which is brought in pouter is not fo good, for that it boeth putrifie, and lofe much of the bertue, and operation. As alfo we boe fee, if we make pouber, and keepe it. it boeth not make lo good woonke , as when the roote is ground, and then forthwith taken. The roote benng ofb both turne blacke, and it will be morme eaten with boles, and become bery light. It will keepe well rouled in Gere cloth. It is gatheren in the moneth of Decober, and it neuer loleth hig leafe.

The comple-

The Complection thereof is bot in the firl bearee, and byte in the faconbe, for that it bath fubtill partes, with forme Gion thereof. bynbing, whereby it feemeth that bis woonke bepng bone, it leaveth the interiour Dembers frengthenen , without bebilitation and weakeneffe , which the other Burgative Dedicines De leave them in: but rather chole that Doe purge themfelues therewith, boe remapne after thep be purged, more frong and harbe , then before they were purgeb . It hath no neede of recufication , for that wee doe not fee in this roote any notable burt, onely the Mine is unto it a corroboration for the woorke , for being taken with coline . it maketh a better warke, then with any other Licour, for that it both not cause bomite, and it mootheth the better.

are brought from the VVest Indias. Fol.27.

It is given at all tymes and in all ages, it boeth bis Eafe to take monke without moleffation, and without the accidentes and rafe to that the other Dedictnes Coluatine are woont to procure. It werks is a Sepicine calle to bee taken, for that it bath no guil taft. Onely it bath the lauour of that with the which it is ta ken, for that it is of it felfe without faucur, and fo it is eafie for Chiloren, for that they may take it without feeling what it is, it is to loke wyle for perfons that canot take Se-Dicines, for it bath nepther fmell ner tafte. 3 have purmen therewich many Children , and many bery olde per- fris ginente fons. t baue giuen it to men of more then 80. preres of age , children and and it makethin them bery fure and good woogke with no olde people. maner of alteration no; chaunge of boby, and without being

Debiliceb og treakeneb.

This Roote boeth ausybe cholerike bumoze , groffe mirt,and allo flegmatike Dumoss, of what kind foener they be and bumoss purrified and rotten, and of both colours : it The woorker Doeth enacuate the Citrine mater, of them that haue the and effelles Doople, with much calines, The principall respect thereof be mernelis to the Liver, making it cleane, and comforting it , and lour of this the Spembers neere abiopning to it, as the flomacke and roote, the inner partes. It boeth cure all Optlations of the fame partes, and all bileales cauled of them: As the Droplle, the Jaumbies , and topntly with his good mouthe it recuffeth the eutl complexion of the Liner, it biffolueth windinelle, and with ealingffe it expelleth it, and boeth open all the haronelle of the Liner , and of the Lunges. and of the flomacke . It taketh away olde griefes uf the beat , and munbifleth the brayne and the Sinewes. and emprieth out the bumors that bee in the head, or paries thereof. In the Difeafe called the Lamparones , which is the Kinges Guill, it makerb a good wochke:in olde griefes of the bead called the Megrim, and the Falling lickneffe. and in all Diffillations, or olde runninges, in parmes of the Toyntes,both particular and bninerfal, as in the Cout Ir.

03 thruca-

The first parte of the things that

thetica, in papers of the stomacke, emptying the cause, and to griefes of consuming windines. Also in papers of the Clippe & Bladworder.

To griefes of consuming windines. Also in papers of the Clippe & Bladworder.

Der, in papers of the stone and Colicke, of what kende soenerit bee, it maketh a meruellous woozke. It curech the papers of women, and especially the Pother, by emptying and taking away the cause, as namely those causes which come of cold humors of windinesse, and in the griefes of the brest, as of an olde cough, a shortness of breath, so thing this roote oftentymes it taketh it away, and healeth it. Also in griefes of the Reynes caused of grosse Dumors, so it poets

emptie and expell them.

Su griefes of the Poxe.

In griefes of the Pore it maketh a greate worke. And it feemeth that for these griefes our Lord bid opdaine it, emptying the humors of them, which for the most parte are colde, and especially when they be waren olde of long tyme, it purgeth them, and doeth expel them without any paynes, by multiplying the taking thereof as many tymes as is necessarie, for that in these instructies that bee olde, and of long continuance, one evacuation is not sufficient, but it is necessary to have many evacuations, which may be done without dawnger with this Roote: and it is not to bee marvelled at, if that with one curcuation therewith doeth not follow the health that is wished so, but that many tymes it is needful to make often repetition, to the intent to roote by and expel the cuil, and naughtie humors, that are the cause of the salve differen.

In agenes.

Mote.

This roote booth maruellously empty footh the cause of the large Feuers, and importunate, and all Feuers compounded, and chiefly in olde Feuers, as Tertians, Quotivians, fleguagike, and in such diseases as commonly come of optiations, bling thereof at the type that is needefull, so that in the lyke large and importunate diseases, the Philitis on must not bee content with one eurenation, but with many, digetting by little and little, and anopting out by little and little, seeing that the anopting out is bone with such as fur aunce

whese.

The Rule and oper that must be kept in the administra. The order tion, and gening of the Bouders, made of the roote of Me- that ong be to shoucen, may learned of the Indian Philition that were have be kept in talpoken of, and since it hath beene vied in divers and sundie king of it.

fathions.

The first thing that is required of him that that take this It is connent. Pouter is, that he bo prepare himfelf with good biet, & good ent that apper, keeping bimlelfe from all thinges that may offence there be a bealth, and toble thele meates which are molt commentet for preparative bim, a to bifpole the bumo; that mincipally bee metenbeth for kim ibas to anopte out, a with lome Sprope, that may hour the fame fal taken. Exipert that the humon is bisposed buto the may to be prepared where he may go out. And for this it is good that he take the counfel of a Philitto: phe muft ble Blifters, if the Belly be not obedient at the leaft the bay before be fhal cake it, and if by chaunce be that neede letting blood be thali boe it with the tudgement and opinion of a 13bilition. The body to prepared and ready to be purged be fhal take this roote cholen as the bane fait, and it muft be grounde, making Douter of Howerbefe it, of an indifferent finenelle , and may of it the quantitte ponders fall that mult bee taken, as wee Chall fpeake of , and put it into be taken. whyte Ellyne, which is Backe, as much in quantitie an is needful for to brinke, and it muit be taken in the morning. Zipne is the beft licour that it can bee taken withall, and fo it is bled generally in the Invias, for the Wine as wee have lapbe , boeth corroborate and geue frength to thefe Bouders ...

The first part of the things that

Pouvers, and because there be some that can vink no wine, is such case they may gene it in soven water, wherein Dynamon hath beene boyled, or Anis or Feneli seeds, and if the pure wine doe offend them, it may be delayed with any manner of Mater, but the quantitie of the Mine that shall be taken, is so little, that it can not offende, nor molest anie person. It may be delated with Choise, or Languebeese water, and because this medicine is not genen in sharpe Agues, but in large and temperate diseases, it doth beare the Mine better then any other licour.

Allo they gene thele Boubers with Conferma of Aliolets, and with Sprope of Aliolets, and it is a good practile : for with his color and moraure, it does be correct the little heate, and brought that the Battent bath, and let them brinke byon

it Mine matered, op fome water as afopelaibe.

There is made of this Power Willes formed with electuary of Roles, and lurely they make a very good worke and purge well,

Also they voe put it in pasts of Waster bread, of in Parchpaines, and as it both no cuill favour, so they voe not feele it. At serveth much sof children and sof them that cannot cake the like thinges.

The Billes that mult be made of this pouter mult be berp little, fornewhat greater then Coriander feebe , that thep may diffolue the rather, and not beat, and to they work more

quickly and better.

They may be genen in the morning and at night, these powders be received with most prosperous successe, beeing made by with Syrope of Roles of nine insulings, mingling the quantity that thereof shal be taken in two ownces of Syrope, and surely this mixture booth make a meruellous wroke, sor that it both strengthen, and insorce much the worke of the powders.

At anopoeth Cholerike, groffe and fleugmatike humore

Otherwife to gene it.

There are made pils of it.

And if procelle of tyme baue taken fre be the true Porre. A good di. and thettue Balamo, and other Debicines that they of old greffion. tome bab, of the which in our tome there is no memorie, and much the tyme are lott per tyme it felfe in place of them. bath discourred and given so many and to sundy thinges as mer haue fpoken of as our Decidental Indias Do fende be. In elpecially the Mechanese, a purge mot excellent and mentle, which both his mork with fuch affirence, being white in colour, pleafant in fauour, and in finel caffe to take, without any lochlomnes in working, and without that boytiblenes, that other purges baue, and without thole accidents @ farnines that come at the trone, that they be taken, o with out that diffuietnette which it maketh when it woojkech.

This Roote bath ouer and aboue that, which is fapte, a ther properties, and bioten morkes, that wee bor not reach buto, which with the tyme and ble of them halber knowen

and discourred enery bap.

The traight of quantitie that is ginen of the Bouber, 7 be quantite made of the Roote of Mechagean, is conformable to the o that as ginen bebience of the belly, of bim that thall take it. Some there of n. be that Dae purge with little quantity. I knowe a Bendeman of this Realme, that with the maight of halfe a Ryall, which is iii, b. both purge bery wel, and there are other that baue neeve of the meight of rit. B. and others of the maight of poiti. 8. And inchis every one oughe co measure the quatitie, as be bath his belly in obedience, more or leffe. Cuen fo they aught to limit the quantity conformably to the are of the Battent. For that the Chilbe bath neeve of little, the Boyc of more, and the arong man of much more; and the Leane

The first parte of the things that

Leane of lelle, and for this earlie the Philition mult meafure the quantitie as hee feeth it comments. Because to the Childre he shall give the waight of iti. B. and to the Bop the waight of thi, il. and to the Pan the waight of pii. B. which is commonly so taken, but to the Woman it is not somewhene to give lettle then the waight of twelve pence, a in this there may be had a consideration, seeing that it is in the hande of the Philition to take away his worke when bee both see that it excedeth, it is better to give a little too much, sonsidering that with taking of a sewe supplings of broth, if it doe exceede, the excelle may be remedied.

This is the limme which I have briegifoode buto this bay of the Roote, which they bring from the Pronince of Medicaer, and when I hall know more of it, I will wrote

as the tyme and the wie therof thall give occasion.

Of the quicke Sulpbur.

Quiche Sul-

Den 3 made an end of myeting of these last tynes, Barradine of Burgus the Poticarie, a man learned and expert in his area, bid shewe mee in his shop a pecce of quicke Salphar brought from our Indias, a thing most excellent as ever 3 same, and in our tynes the tyke bach

not beene feene. It was bright tyne Glaffe, of the colour of fine gold, caking a little of it, and cathing a tinto the Fyre, it booth caft from it a very greate finell of Brimitone lyke to greene funcke, and the peece it felfe (finelling therunto) hath no finell.

Brought fro

Note.

Aint it.

They brought it from Quino, th is a place in the pronince of Pern, from a Pine that there was founde in certapne Dilles, nere unto the Pines of gold. And it is not in bapne that the Alcumiftes doe fay, that the matter of Gold, is the Quickeiluer, and the Hulphur, that is to fay, the Quickeiluer.

are brought from the West Indias Fol.3i.

ffluer the matter, and the Gulphut the form er and maker. And fo this which I fam, was like to a peece of golbe moft

They bring from Nicaraga, other Sul phur, but it is ruf. Entl Sulfet like to Albes , congeled without colour op baigbine ffe , plar. behich is found nigh buto the Clolcan of Nice aga, the which being caft into the fire both caft from it the fmell of Prime Rone, but it is a peece of earth, and in nothing is like to thet, of the Prouince of Quiro, more then in the fmell, nepther bath it that colour of Golde, nos that brightnelle that the other bath, which is of Quito.

The fame bepng applyed in things, that are convenient for medicine, worketh meruellous effectes : chiefly beepng The thinges grounde, and billolued with wine, and applied in the night that is profito them , that have their face reobe inflamed that bee like to seth in. Lepers , bling it certayne nightes, after they have beene at the floole, it taketh the rebnelle away, and bealeth it marmelloufly, of the which I bane greate experience. It bealeib the Skabbes , bepng billolued with onle of Roles . Caking the weight of fire pence in an Egge, it bealeth the Colthe . and the Balley. It is good for the paper of the Scone, and bepner taken, it bealeth the Launbers.

It is botte and brie erceffinely, which appeareth by the friendfip, that it bath with the fire, for being touched with The complex it, it inflameth, and maketh a flame. It is the principal mate Elion thereof. ter, of that Diuelibe imention of Sunpouber , which bath beene the cause of so many emils, and burtes.

Tof the wood Aromatike.

L fo the Capte Barnardino de Burgus thewed mee & 201000, which to my feeming, 3 thought too haus beene the boly mood, that I meane of Saint John de Puerto Rice, the which was of this manner, and

are brought from the West Indias. Fol.33. Catholike Roiall Maiestie.

Hese daies past I wrote a booke of all thinges which come fró your Occidentall Indias, seruing for the vse of medicine, and surely it hath been taken in that estimation, that the things which in it are intreated of doe deserue, And seeing the profite that it hath done, and howe

many have been remedied and healed with those remedies, I did determine to proceede forwardes, & to write of the thinges, which after that the first part was written, have come from those countries, of the which I have vnderstood, that no lesse vtilitie and profite shall come, then of those which are past, for there shall be discovered newe thinges & secrets, which will bring admiration, never to this day seene nor knowne before. And seeing that these medicinals things which we do treate of, & the Realmes and Countries from whence they come, belong vnto your maiestie, and he also that writeth of them, is your Maiesties subject as I doe desire your Maiestie, to receive

this trauell into your protection, and that the reward may be such, as for the like workes dedicated to your Maiestie is accustomed to be geuen.

Your Maiesties Subiect
Doctor Monardes.

F

Of

The second part of the things that Of the Tabaco, and of his

great vertues.

DIS Pearbe which commonly is called Tabaco, is an Pearbe of muche antiquitis, and knowen among it the Indians, and in especia ally among them of the nem Spayne, and after that those Countries were gotten by our Spaniardes, bewer canche of the Indians.

they bid profite themselves with those things, in the wounds which they received in their Charres, beating themselves

therewith to their great benefice.

Elithin these sew perres there hath beene brought into Spayne of it, more to abornate Garbens with the faire-nelle thereof, and too gene a pleasamt light, than that it was thought to have the meruellous medicinable betwees, which it hath, but nowe were over his it more for his betwees, than so, his fairenelle. For furely they are such which doe hing admiration.

It is growing in many partes of the Andias, but opdinarily in morth and that during places, and it is needefull that the grounde where it is sowen, bee well tilled, and that it be a fruitefull grounde, and at all times it is sowen, in the bot Countries. But in the colde Countries it must bee sowen in the Moneth of Parthe, so that it may descube it selfe from the frost.

Howeitis

are brought from the VVest Indias. Fol.35.

This hearbe Tabaco bath particular bertue to beale In parnet of griefes of the bead, and in especially comming of colde the bead. causes, and to it cureth the beabake when it commeth of a cold bumos, og of a windy caufe. The Leaves muft be lapbe botte to the griefe, and multiplying them the tyme that is needful, bntil the griefe be taken amap, Some there be that Doe annoynt them with the Dyle of Drenges, and la they performe a bery good woorke.

In any manner of griefe that is in the boby on any other In any griefe part therefit belpeth, moreebing of a colb caule, applyed of the body. thereunto,it taketh it away, not without greate abmiration.

In griefes of the breft it morketh a maruellous effect, & In griefes of inespecially in chose that Doe cast out mater and rottennesse the Broft. at the mouth, and in them that are (bort breathen, and in any other olde entiles making of the bearbe a becottion, on with Suger a Sprope,and being taken in little quantitie, it both expell the Patters, and rottemes of the broff maruelloully, and the fmoke being taken in at the mouth, boeth cause that the matter be expelled out of the breft of them that to featch. their breath Chorce.

In the griefe of the flomake, cauled of colbe,og winde, In the griefe the lemes being put bery bot, it both take it away, and biffolueth it by mulciplying the ble, butil it be taken away. And it is to be noted, that the feates are to be marmed better the any other amongs Athes of Embers bery botte dojufting To warme the bearbes into them, and to to warme the well, a although thep be lapte to with forme Athes, thep make the worke better, and of more frong effectes.

In Opilations of the flomake, and of the inner partes minerpally, this bearbe is a greate remubp: for that it boeth Diffolue, and confume them, and this fame it boeth in any other maner of Opilations or barones, that are in the belly, the cause being of a color bumo, or of minoines.

They muft take the bearbe greene, and flampe it, and how to applie with thole flamped leaves rubbe the barones a good whyle, ".

make.

amongest In opilations

The second parte of the things that

and at the tyme as the bearbe is in the Botter a Camping. Let there be put to it a fewe proppes of Clineger , that bis morke may be made the better and after the place is rubbes where the paine is then lay byon it one leafe on twoo leaves of the Tabaco being botte, and fo let it alone til the nest Day, and then boe the like againe, of in place of the leaves ble a Linen cloth wette in the botte Boyce. Some there bee, that after they have rubbed it with the flapes leaves, Do annoput It with owntments, made for the like euils, and boon it thep lay the leanes of the loyce of the Tabaco. And furely with this cute they have biffoliet great and harbe optlations, and bery alo (wellings. In the artists of the flone, of the Etibneis In the griefe and Reines, this hearbe morketh great effectes, by putting of the flone. the leanes into Albes, o Cintres , botte, that they may marme wel and then being lapde bpon the griefe, multiplying the ble of it as often as it is needefull. It is necellary in To put them the leethinges that are bleb to bee made for Blifters to put into them mith the other things, the Leaves of this bearbe, for that they that profit much: and likewife for fomentation ons and Plaifters, that they fhall make.

in Gufters.

In griefes of wmds.

The exitt of she Mother.

In griefes of windes they worke the like effect, taking away the paines that come of the windinelle, applying the

le anes after the fame forte as is aboue faite.

In the griefe of women, which is called the enill of the Bother , laping tooone leafe of this bearbe Tabaco berp botte, in the manner as it is Capbe, it both manifelly profite and it muft bee lapbe bypon the Mauell. And under it fome Doe ble to put first of al, thinges of good finest bpon the Mauel, and then boon that they lay the leafe. In that which they finde most profit, is to lap the Tacamabaca, or the ople of He quit Amber, ant Ballamo, ant Carama, or any of thele buto the Mauel, and to kepe it too it continually, that it may cleave bato it, and this monketh manifelt mofit in griefes of the Bother.

are brought from the West Indias. Fol. 36.

In one thing, the momen that timel in the Indias Doc cer For an enill Lebrate this bearbe, that is, in the euill breathing at p mouth breath. of children, when they are oner filled with meate, and alfo of pibe people, anoputing their bellies with lampe ople , and laying fome of thole leaves, in athes botte to their bellies, allo to they thoutbers, for it boeth take away ther naugh. tp breathing ,and maketh them goe to the floole, applying it botto the fundement at what tyme it is needfull, and if the leanes bee afheb it is the better.

Comes, of all kindes of them, it killeth, and expelleth For Wormer, them maruelloully , the feething of the hearbe made into a Dyjope belicately, beeing taken in bery tittle quantitie, & the topes thereof put on the namel. It is needful after this be bone to gine a Gliffer , that may auoybe them, and expell

them out of the guttes.

In griefes of the Bointes comming of a colbe caule it In enill of the maketh a maruellous works, the Leanes of this Tabaco ber forntes. ing laid hours upon the griefe the lyke both the Toyce la poe byon a little cloth botte, for that it boeth billolue the burno, e taketh away the paines therof. If it come of a boccaule it both burt, fauing when the bumon bath bene bot, and the fubtil part is biffolued and the groffe remayneth, then it both profice as if the cause were coide, and it is to be boder flood, that the leanes being lapoe, where as is grisfe of the lapbe caule, in any part of the body, it profiteth much.

In fwellings of irreald Impollumes, it both diliolue and. In cold fwelbotoe them, walbing them with the botte Tupce, and lapting lange. the beaten leaves, after they be flampt, on the leaves beeing

tobole of the laybe Tabaco, byon it.

In the Coothache when the griefe commeth of a calve caufe, or of calpe Rumes, putting to ita little balt mabe of For the toshthe leafe of the Tabaco, walking first the tooth with a finall ache. cloth weetin the Timee, it taketh away the payne, and flay. at it, that the putrifaction goe not forwarde: in bot caufes

The second part of the things that

it both not profice, and this remedy is to common that it besi let euery one.

For Chilblames.

Chis bearbe both maruelloufly beale Chilblaines . rub. bing them with the flamped leanes, and after putting the banbes and feete in bot water, with Balt.and keping them marme: this is bone with great experience in many.

In Venom de Venominas wounder.

In Elenom and benomous wounds our Tabaco bath great commendation, which bath beene knowne but a floate come fince, for when the wilbe people of the Indias, which eace mans flethe bot thoote their arrowes, they annoince them with an bearbe of Composition made of many poylous, with the which they thooce at all thinges that they would kill, and chis Clenom is fo ftrong, and pernicious, that is killeth with. out remedie, and they that bee burte Dye with great paynes and accidents, and with mabnes, buleffe that their be found remedie for fo great an entil. I fethe yeeres walt they laid to Sublimatum their mounds Sublimatum and fo were remedied and furely in venomed in those partes they have luffered much with this bezation of poplan.

woundes.

A lictle whiles patt, certains will people going in their Bootes to & John De puerto Rico to thoote at Intilit. Spaniaros if that they might find the, came to a place ant killeb certain Indians, & Spaniarbs, & bib bart many, as by chaunce there was no Sublimianum at that place to heale them, they remembres to lay upon the mounts the Hoyce of the Tabaco, e the leanes flampet. and God mould, that laping it bpon the burtes, the griefs, mabnes, a accidents taber, with they byed, were mittigated, and in fach fort they were belivered of that enill, chat the firength of the Clemen was taken away and the wounds were bealed of the which there was greate abmiration. Which thing being knowen to the of the Blande, they ble it allo in other buttes and moundes, which they take when they fight with the wilde people, nowe they flame in no feare of them, by reason they bane founde

are brought from the VVest Indias. Fol.37.

founde to great a remedy, in a cale to befperate.

This Dearbe bath alfo bertue againft the bearbe callet Againft the of the Croffrbone hotter, which our bunters bee ble to kil bearbe of the the wilne beaftes withall, which beathe is Clenom molt Croffebow. Orong, and boeth kill without remebie ; which the Kinges footer. plealine mas to proone, and commaunded to make experience thereof, and they mounded a little bogge in the thoate, and per loosthwith into the wound the bearbe of the Croffe. botte Gotter, anti after a little tubile, they pounes into the felle fattes wounde that they had amounted with the Croffehowe thoocers bearbe, a good quancitie of the Jupce of Ta-Sera, and laybe the stamped leaves upon it, and they tied up the bogge, and bee eleaped, not inchoice great aumiration of al men charfaine bin. De che ichich ; the excellent Phillei-on of the Chamber of his maieltis; Doctor Barnarde in Dollor Barthe margent of this booke, that late it , by the commaun norde. bement of his Maiette, wirteth thele wordes: I made this experience by the commandement of the kinges Spalelly. I wounden the bogge with a knife, after I put the Croffethe Concers bearbe into the mounte, and the hearbe mag cholen,and the bogge was taken of the bearbe, and the Tabace and his Tupce being put into the wounde, the bogge to fcapeb and remained tobole.

In the benomous Carbuncles, the Tabaco being applied In venomous in maner as is afosefaid both extinguift the malice of the ve. Carbuncles, nom, a both that which all the wooskes of surgery can boe, butil it be whole. The lame effect it worketh in bytinges of Inbringes of benomous beaftes, for it killeth and extinguisheth the malice venomous of the benom and healeth them.

In woundes newely burt, and cuttes, drokes, prickes, Inwounder of the other mannet of wounder, our Takaco worked mar-newly burte. wellass effectes, for that tooch beale them and maketh them found. The wound must be walked with wine, 7 pro The manner cure to announce the abes of it, taking away that which is of healing. Cuperfluous, 7 then power into it the Juyce of this hearbe, 2

It comforteth the Limer and the Homake, and doth desops-Late.

Hiforie.

In one of the thinges that they have founde motte profite in this mater, was in Opilations, in the interiour partes, of the which they came to bee funding, and to bee full of the Dropfie the most parte of them . For of the long and large beates which they babtaken, they came well neere genevally to have thefe difeales . And with this water both the Imelling and the opilation ment away , and there with thep came to be made whole of the Quotibian Agues , which the most parte of them bab, for in gopng thither the most parte of them fell fiche, of their long and importunate feuers, in the which I baue experience by this Edlater, bepng taken as it ought too bee, for it moorketh maruellous effectes, and baue healed many therewith. for the principall effect that it bath, is to comfort the Liner, and to billothe Dutlations, and to comfort the fromake, which are the two principall thinges, that are most convenient for the Buliti. on to boe, that the lick may be bealed of the like bileales. For in thele enils it is not to be feared that the bumors be corrup. ted. And if the principal members be burt, one of the things that thele medicines which are brought from our Indias Do principally, when the water of any of them is taken, is to comfort the Liver, and to amende it , that it map ingenber good humors, for if this be not bone the cure is in baine. And fo our Saffafrat bath a maruellous propertie, to comfort the Liver, and to biffolue the Opflations, in luch for that it noth ingenber alomable blood.

Thealed a poung man which had an optlation of certapne Certians. And thereof be mas all woine, in fuch lort that he was well neere full of Droplic And with purging

are brought from the West Indias Fol.50.

bim many times with Billes of Ruibarbe , and by taking of Dialaca amongelt the laid Burgations, and minking the mater of this Sallafras cotinually without minking of any other thing he came to be bealed bery well, and was cleere of bis fwellings, and opilations. And be bib not let to brinke it

bntill be remayned perfectly whole.

The manner of curing with this water made of the Saffafras, for the Tertian Agemes e long feuers, I will fbeme you, and what hath palled in this peere, that I mote this. There have beene many people difealed with the tertiane A. getnes, lo importmately, that no manner of medicine was fufficient to take them away, and to roote them out, informach that me let many alone, with onely good oper, and good gowernment, without belping them any more. They were opila. teb, and bab entil colour of the face, and fome of them mere (moine.

And at that time it was, when the Captayne generall Peter Mellendis came from the Florida, and brought him in common, this wood of the Saffafras, and when every man lendes. Dis fo much maple it many of them that has Certians tooke mater of the Saffafras keeping the order that the Souldiers gane them, and lurely I fam in that greate maruelles, for that they healed many with the ble thereof. And onely of the tertians that lo much bid molell them, but allo of the Dpila. tions and enill colour that they bab. And feeing this, I caufeb other to take it, that without counfel burd not boe it. And it bid bery wel with them, but it muft be wel feene unto bom it (boulde bee genen, and to whom, that the cause may carrie with it both order and mealure.

That which opbinarily was bone , was to gene one How this macuppe full of the Colater well forden, in the mouning with ter muft be Spugar or without it , and after to blinke the water contismually , that which was more funple , then the firthe, and genen. as the Philition Chall indge to be molt conutnient for bim that is licke, keeping the conditions in the taking of

Ra

The second part of the things that

For them. shar bane fouls bandes.

In one thing Thave feene it in many people to bring no table profit, with the continual ble of this mater, and it is in them which have foule bilealed handes, which cannot erere cife them, as they were mont to boc. Thealet a Gentleman which could not write, that when he went to write, his hande fell potone by little and little, and the penne alla, after bee bab begon to write not pad fine op fire letters. And bee toke & Cuppe full of that, which was latt formen in the mounting. and after be manke it , bee continued two boures in bis hende, and after be role and went about his bufineffe. And be Din cate at his binner good meates, and at his Supper bien Diet and Danke the limple water of the fell fame Saffafrat and be was bealed very melibaning fpent a great fomme of money on Philitions and Pedicines, which bib not profite bim any thing butil be came to be remebleb in the order as is aforelaide.

Thewater bormaketh aman goete the Stoole.

Danp bib certifle mee that, which nowe I finde by er nerience,and learned of them that were ficke in the House me, and couls not goe to the Coole, that the Whilicion which is there, bib cause them to take in the mogning fafting a good Cuppe full botte of the water of the Saffafras . Int to pip foften the belly and they went to the thoole bery mell. which we have feene beere to bee true by experience . And there was a Spolbiour which certifies mee, and propued it Por the going with others of his companie, that baning flooles by intife gellion and rawnelle of flomacke, for mant of beate, it tooke by indigeftie. them away, with taking of one good cupfull of this water enery morning falling, and to with brinking it continually. but that which be manke enery mouning, be manke it colo. and preneuerthelelle bee was bealed bery well of the flire.

to the Stoole

In the enil of inbich be had many peeres. Ba griefes of women the water of Saffafras Doeth great Women. Theewillof In profite, and in efpecially in that which is called the end of she Mother the Mother:and where there is windinelle, it confirmeth & & wiediner. piffolugthit,and alfo any maner of colde of the belip, and ie

Diff:1-

are brought from the VVeft Indias. Fol.54.

biffolueth the fuelling of it, curing any manner of vifeals which moccebeth of the Bother. And this is to experimenteb, and fo put in ble, that many have beene healed with this mater, that never thought to baue recovered be alth, And in the withholding the Bonethly course that commeth, not to women, this mater maketh a meruellous moorke, by proudking and making it come in them that wholie boe tacke it, In flopping taking one Cuppe ful of this mater in the monning : & brim the courfes of king it ophinarily at binner , and at lupper, and in the bay Women. tome being more limple, then that in the morning, bling good regiment, and booing other thinges which may belve the mater, that it may bee pronoked. And buto them allo to phome it boeth not come wel, it byingeth manifelt profite, taking the water in forme as is aforefaite, keeping them the tyme that they take it, from fuch thinges as may offende them: and beeing bled it boeth bilapilate, and make a good colour in the face, as it is freme by the experience of them that boe vie te, having need of is. Let them bemare if Where as is es bene much beate, on bee of a botte complexion , in fuch much beate cafe let them moverate the quantitie of the wood , and the this water is feething of the water, as is connenient, and this is calle to not connense be bone, by feing bowe it goeth with them at the beginning, ent. with the ble of it, and according thereunto they may rple of Cal, as ic feemeth to be necellarie.

Some women boe ble of this water, for to make them with chilbe, and in Come it bath topought the effect as it is Tomake was wel knowen. Chat which I can lay, is that a gentlewoman, men with beeing many peeres married, without haufng chilbren. sooke this mater, for that ber bulbanbe bled it for certaine enilles of Doilactons, and of an agewe that beloe bim. with certapne fittes of a bouble tercian which behad, and bee continued with the taking of it in the Morning botte. and at Dinner limple, and at Supper, and in the bap tyme, aceping a good gouernement, whereby it came to paffe,

The second parte of the things that

that the was with chilbe, and brought foorth a fonne.

and I buberftanbe, that one of the principall bertues that this water bath, is to byput away the Bother for this effect, for the most parte of women that base no children, id for the greate colbe that is ingenbered within the Bother, which boeth binder the cause of generation, and as the water tyleth it confumeth it, comforting the place and biffoluing the minbes that are the let of it : 3 am fure that it will manifettly profite, as we have feene in them which boe not bring forth childre, for hauting too much beate and brieth, to whome permit not the ble of this mater, for because it will not profice them, and if they bo take it and feele burt thereof. let them not put the fault in the water but in their complexi-

ons leing that it is not commenient for them.

This water doetb make faste.

Note.

The ble of this water boeth make fatte, and this is certainly knowen, for we have feene many leane and ficke, that baue taken it, and baue bealed of their enils, and baue reco uered much more fleth, better colour, as thole people that come from the florida, bo pratte it bery much: they they al fay, that the ble of this water boeth make fat, and it happeneth fo to many, and not onely it healeth them of their bilea. les, but also maketh the remaine with a good colour. And fo it feemeth by the that come from that country, for that they come al fatte, and of a good colour, who I beleene as they mere bery fick, fo that they were bery leane & yellow, when as they were bealed of their infirmities which they had they gathered flethe, and became of a good colour, ingendering in the Liner good blood, by the which the members were better maintapnet, than when they were ficke. And farely it is a greate thing that this water (boulde woonke this effect. confidering that it is bet and tape, if it were not for the caufes that are aboue fapt. and I baue feene many that entered to, to take the mater of the wood, leane, and with an entil colour, to come footh frong and fatte, and of a good COLDERT.

are brought from the West Indias Fol. 55.

colour, caring no other thing then Relinges, Almondes, and Buket.

In peftilent and concagions difeales, which we have feen. In Peftilens in the time of the Bellilence pall, there were many that bell- and corrne red to brinke it, to preferne them from that entil. And me arer. bid fee that none of them which bleb it, were wounded of the difeale, that then reigned. Dany bid ble to carry a peere of p Roote of the Cliood with them to finell to it continually, as to a Bomanber. For with the fmell fo acceptable it bib reetifie the infected appe : I carried with mee a pecce a great time, and to my feeming I found great profite in it. For with it & with the the wing of the rind of the Cidron not of the Lowmon in the morning, and in the day time, to preferue bealth it bath a great ftrength and property. And it feemeth to me, that I was belinered by the belpe of Goo from the fire, in che which wee that were Bhilltions went in, bleffeb be our Low & D D that beliurred be from fo great euill . and gave be this most excellent tree called Saffafras, which bath to great vermes, and worketh fuch maruellous effectes as we have (poken of, and more which Eime wil fhewe bs, which is the viscouerer of all thinges. It thall one well to hewe the quantitte of the wood, and alfo the quantitie of was ter . wherein it thall be fobben, to preferibe a rule in waight and mealine, in effectes, and temperatures, for them that are bot, and others that are colbe.

I will cell pou the order that ought to bee heptin ta. How this was king the water of this excellent wood, which must bee made ter orgie to conformably to the otleale of him that thall take it, and ac be made inconding to the quantitie and completion of the fiche bodie. generall. For bato the Cholerike Werfon the water ought to bee ge. uen leffe fobben , and with leffe quantitie of wood , and to the flegmatike more fooden and with more quantitie, of moode. So the difeales thould be confidered of. Cinco them that are bery cold the water ought to be genen more forden, and with more quantitie of ZClood. And buto them that

g

The Second part of the things that

be not so colve, but voe participate of some beate: the water ought to be gruen leste soven, p with leste quantity of wood. The like shall be done in the bot of colo times, of in the age of the person, of the most caules making to this respect and proposition. And so, the more light, A will bere set downe the manner bow this water ought to be vied, the which shall seeme to spinion which shall seeme good to enery one. For in these these opinion which shall seeme good to enery one. For in these instructions that he bery cold, they must let up the water in quillates, both in sething and also inquantity of the wood. And in the viscales that are not so colde, as that doe participate of any beate, they must set the water lower, in Quillates, see thing it lesse, e putting in lesse wood, the maner and opder of

the meparing it is this.

The mater it is particular.

Pou thell choole the frethell mood that may be han, and that which hath a tyune. I of that mood which hath not the rinde, is not good, not taketh effect, you must procure that it be of the roote, for that is the belt of the tree for thele of fects and cures, and for the vileales which we have spoken of And if in cale there be no roote, then the houses are the bell that groine in the higher part of the Erees, and in cale the bowes lacke, then is the tree good, etf lo be that the one and the other baue the rime of the roote, let there be taken lelle in quantity therof, a more of the bowes, a much more of the tree, tobich muft be bouble to the quantitie of the rante, Mothe let be speake of the bowes as of a thing in the mistell, be-Eweenethe roote and the tree, beeping that which continue ally they boe baing , of the which you fhall take baile an Dunce, and cutit as fmall as map be. . And it muft be put into three Bottelles of water in a neme Carthen pot , and there lie a ftreping two bownes ; and afeet it muft bee fonden at afire of Coales, untill the two partes bee ronfumet, and the oneremapne. And after it is colbe, let it be Grapnes and kepte in a glaffed beffell, and bpon chole fmall cuttinges of wood that have beene alceady lobben, let there

In the enill of the Poxe.

Ehis Bencheman layerh which brought this Roote, that tempofiteth muche, in debtfeale of the Bore , taking it in Mouther ; or the feething of it : which I baue not epperimenten, for that wee bade to many remedies for this mill , that wee have mabe as epperience thereof the faith that it is to be taken without keeping more, then when they be taking the mater, or pointer, and that then they keepe good opber and good government in their meates, and in all ocher chinges. W

ficheneffe.

In the falling fichnelle, a throng bileale, and well nerre In the falling incutable ,thep lay that it bach a great propertie , and they heth greate effectes, caking the poutes of the rinte of the roote, with wine of with water, as is most convenient for bien that fhall take it. Demanfelles one berre, who was more then fourtie peeres of age, and hat hat it of long time, to take it, and hicheren be bath not felte moje then to bomife michrhe nouber, when be taketh it, and be caffeth by much Choler and his faintnelle to not fo great as it was wented be. It feemeth to me, that it camet take it strey . Pop it Goulde morke that effect in them, that boe not paffe twenty and fine peeres, who buto that time have remeby. I will proue it by pon fuch : it moulte be no little good, that it might worke the effect that is fnoken of it.

In griefes of the bead.

In griefes of the beat , they ble this roote in thole partes , as a great and fate remeby. I will tell what bath palleb . The firft time that Elawethis roote , was in the nomer of one which was licke, who came from Mexico, and be brought it for a greate thing, laying : that be bealen therewith and tooks amay the paynes of the bead, which he bab certapne bayes, and be after metf that be fonibe ble it. I taften of the roote, and it feemen tome as I bane Grove,

are brought from the VVeft Indias. Fol.59.

and I counfelled him that be thoule ble to, as they had melled bim to boe in Mexico, and to be bib cheme it in the mounting, and it tooks alway the paines of the head, which a long tyme bab moleften bim.

After this, a paffenger tolbe mee , which came in the Shippe, where the Gentleman was that brought a quantitie of this roote, and be chemen it wel, a bid bifficume theremith, and immediatly it tooke away the payne, a be themed me a little char remained therof, which was the fame that I fame, and fince that, forme have bled it, and it bath bone bery mel with them.

In the toothache, they that have brought it into Spaine bo much efferme of it. And being in the longing where this man was which brought the roote, the bott of the boufe cer- ache. tified me, that having the toothache bery griguous, it tooke it away from him with thetwing the rinte of the roote, on the fame fibe where the costs was which grienes bies , billeming therewith as much as he could. and I being one bay in the Cultome boufe civing a Genoues which mas there, an other of the lame Macion complained bato mee of the toothache, and wee couled to be brought forme of the fato Roote , and in the prefence of as many as were there, bes chewed the rinde of this roote, baning bery greate paynes, and be anoybed much fleume, and in billeming it began to take away the paynes, and before he went from thence bee mas throughly cured. Certaine bayes pall I had a grief in one tooth, fo that it pained me all one Might, and parte of one bay, and I gathered in a garben which I boue in my house ecreaine leaves of Tabaco, and allo the afmelaid roote, and 3 chewed both together , and villicumes, and the paines ment from me, and returned no more to me, being more then fire monethes after 3 was payned therewith. This is the effect , that I have obtayned of this Carlo Santto , which . being fo little tyme knowen, is fufficient . The tyme will aifconer the rell, and as wer that buterflande more of it, fo

Certaine bapes pall, a poung man tobich tooke counfell of me, that came from the Provice of Quice, and beeying with me, there came buto me a neighbour of mine, laping, that his baughter was berie fiche of the flige, and I hat ber in cure, and ber bileale increaled with blood, requelling one that I thenbe goe to bille ber. The Indian which was with me, alked me if they were fooles of blood, I faid year and he lapo beto me that he boulde gene her a ching , that beying made into pouter and taken, woulde take them away forthwith, a that in the Brouince of Qane, it has been experimented many times. The father of the licke mainen, ment with him to his boule, and he game him certapne peeces of a fruite, which feemeb to be of a greate tree : of the one parte they were very fmooth, and of colour yeallowe, and of the other they were bery tharpe and bery rebbe, informach that they feemed of a purple colour. They were ground fmal, and be gaue the pouter to the licke woma, with the water of the bed of Roles, once that Cuening, an other time in the Sponing, and immediatly the flig bid reale, & from that time wared better, whereby the came to be whole.

And as for the man Inener fambim after be gaue it to ber.

23

although

The fecond part of the things that

although Appennes it with greace viligence. I know not what it was, not what he was that game the fruite, and in this force there be many other thinges in our Occidentall Anties, which have great because, and great medicinable ferretes, which hall be known every bay maje, and continually be discoursed, that we may profit our felies by them.

Digroffien,

Of all thele thinges we have leene mantfelly the molite that they have bone, and what by them hitherto bath beene impought. Gering then that these maruellous moonks all the morloe bath proued, healing with them bileales which all o ther philicke could not beale, as it is manifelip feent, in all that bo use the with great belifty a profit, for the which al men are beholving to my billigence, & care. And for that as I have Impitten of them, in the first parte of this medicinall historie, rich bath beene well notes in the monthe, for the things that are treated of therein, and for that you map fee the truite that this my labour bath brought fronth, I will fet notime bere a letter which a Gentleman of the Peru fentme mel neeretmo monethes lince, by the which you thall fee by realon of that I imote in the first part, bom they have bilcoueren the Bezaar Hones in the Peru, which with fuche greate effimation they bring from the Invia of Portugall, am bom by the relation and order which I wrote , they came to the knowledge of them. Athing truely of greate price, and woorthy to be muche mate of , feeing that it is a thing to maruellous and of fo greate baine , and are founde in our Indias . and are fo calle to be bab, and fo true, that wee baue nat any meete too boubte of their effectes and bertues, tubich is not to of them that they bying from the Ditencall Intias , For If there come tenne that are true, there come from thence an bunogeth that are falle. Eliberefore they that buy them aught to looke well buto it, that they be not beceineb . But thole which are brought from our Indias , are all of one Lose, for they differ not, but onely in greatnes of fmaines. The effectes

are brought from the West Indias Fol. 64.

effectes which they morke be admirable, for that their bern tues are mighey againft all benome and Deffilent Agemes. and benomous bumos, as in the thirde parte, & D D willing, wee will treate of the maner of them. The effect of the letter was this. There came a Baket of letters tolled in a feare clech,fo well opered that they might palle to anie part beyog nener fo farre. Which being opened, I founde a final Cheft mate of a little perce of Conta, of a good thick-neffe, toynes together, which was morthy to be feene, and in mette of it came the bearbes, and the leeves that the letter speaketh of, every thing written, what is was, and in one five of the Corke, in a hollow place, there came three Bogar Bones cloales with a Parchment, and Ware, in good opber. Che letter was imitten in a bery fmall banb.

The Second part of the things that To the right Worshipfull, Maister Dodor Monardus, Philition in Seuill.

Ight worshipfull & famous Doctor it will feeme a newe thing to your worship, that I being not learned, nor of your profession, doe write to you in things of your fattity, being a Souldier that have followed the warres in these Countries al my life: I have done this, because I am affe-

Ctioned to your worship, by reason of a book which you have copiled of the medicines which are in these partes, & of the vertues & benefits, that by the haue byn receyned, which are so great that I cannot declare the, as they deferue. And by means of your book we have orderhow we should vie the remedies which we have here, for before we did vie the without rule or measure, so that neyther they did work effect, nor with them the people were wel remedied, which now is to the cotrary, & by meanes of your books, there hath been people remedied, that neuer thought to have had remedy nor health. It is more then 28. yeeres vnto this day, that I have gone wadring by al these Indias, where are many things of those, which your worthip doth write of in your book, & other things also which have not byn brought thither, for bicause the Philitions that come to these parts, are nothing curious. They apply not their eye to the vniuerfal wealth, but to their owne particular, for they come onely to enrich theselves,& for the most part they be ignorat people which passe to those Indias, they doe not esteeme of the good which they might doe. And though that I have no learning I am affectioned to men of learning, & fo I am to

your worthin for that I vadershood of your bookes, and for the fame that you have in thefe partes, which is great, although I knowe you not, yet I was willing to take these paines, which is a contentment to me your write in your ook, geuing knowledge of the Brass flone, & fet down the fignes of the bealts which have the which being cofidered we have happened you a kind of beatts that line in thembuttaines of this country, which are much like to theep or kiddes which your woorthip freaketh of, which are in the Indias of Portugal, which breede &chane these flones, of the which there are many in this country, in the mountaines, & colde countries. They are for the molle of a darke red colour, they are fed with healthful herbes, wherof is greate plentie in the mountaines, where their beafts do feed they be very fwift, infomuch that they cannot bee hunted, but with the hande Gun : they have no hornes, and in that onely they doe differ from them of the East India, for in all the reft they are the same.

The 14. day of lune in this yeere of 1568.1 & certain ge How they tlemen my freends went to the mountaines, to hut, & we bane found were a hunting fine dayes, and we killed some of those the Bezaur beafts, which I have spoken of. And as we went for this floner, purpole, thinking that they were of the kind, of the of the East India: we carried your booke with vs. & we opened one of them, the greatest that we hunted, and oldest we colde finde, & we found no stones in his belly, nor in any other part of him, nor any other thing, wherby we beleeued that they were not the fame kind of beafts with those of the East India, And we asked of certaine Indians that went to ferbe vs, where thefe beafts had their flones, & as they are our enimies, & would not that we should knowe their fecrets, they answered vs that they knew nothing of these stones, vncil one boy which was amongst them being an Indian of the age of 13, yeres, seeing, that we were to delizous to know the fame, shewed vs the secrete of the

A Letter .

canfe. & where the beaft had the flones, that we had there dead, & they were in a certaine little purfe that the Maw of the beaft bath, which is where the hearbes that they feede on are, when they returne to chew their Cudd. And forthwith the Indians would have falled the Boy, for the aduise that he had genen vnto vs because the Indians do efteme much of these flones, & they offer them voto their Gods, os so their praying places where their Idols are voto who they offer the thinges that are most precious, And So they do offer these stones, as a thing of great estimatio, and alfogold filter & precious flones, beafts & childre. And afterward we understood that those Indians which went with vs had facrifized the boy, whom with our hunsing we liad forgotten, and they carried him away from as by those Mountaines, where we never more sawe him. And it is a thing to be considered that in all partes of the Indias, there have not byn found any of these beatles, vnles it were in the high hilles & montaines, of this realm of the Peru-For I have gone oper all the cofitries of Mexico, & by al the provinces & realmes of the Peru, & Islands of Marenon, & by the Florida, & by many other partes of our Occidental Indias, & I never faw any of those beafts, but in these montaines of the Peru . Sir, with all diligence in the world as much as I could obtaine & know of Indians being friends concerning the stones which they take out of those beaftes, is that they are maruellous good a gainst all venim, and against all forts of poylon, aswel in meats as in any other fort,& in the euils of the heart,& to expell and kill wormes, & in wounds poisoned, which are made with mortal herbes, which the wild Indian people doe vie. And the pouder of this stone put into these woulds, is a great remedy, and so the Indians say, that the from is good against the herbe, which is the mortal herby that they themselves dovse to kill one another withall; &c also to killys. For they have killed many of our Spaniards therewith, dying madde, with great accidentes, without finding

finding or knowing any remedic. It is true, that in Sublimatum force have founde remedy, by putting it into the would But if the herbe be fresh & laid newly voto it, it profresh little. & they die without remedy. We tooke out of the first beaft which we killed from that little purse whervato hedoth returne to chaw his Cuild when he lieth on the grounde, nine stones, & it seemeth that by reason the herbes which they feed vppon be of so great vertue, the ioyee of them going to that place by the order of nature, these stones are ingendred, which have so great vertues. We opened others of the that were dead, &rin every one of them we founde ftones, more or teffe, as they were of age, and it is to be noted, that thefe which do feede in the high hils be those which do ingeder the sones that have vertue. For they which feed in the plain countries, as they eate not, nor are mainteined by the good herbes of the high hilles, fo the france that they have , although that they receive some vertues, yet they are not so good as of those which are fed in the motitaines. We have bego to vie these stones coformably to the order which your worship deth give in your book, ministring the quantity that you command Ar for the difeafes which you fpeake of, and we haue forme fuche effectes in them, that have made vs to maruel, and they have healed fuch difeafes, that it is wonderfull to be fooken, Vnto the Lady Katherin Deuera, the Sifter of the Lord Prefider, & to the Lady Mary de Ribera & to Diego de Andrada & to Diego Dela Isla , & to Mariand wife to Maifter John Plutino & to the father Toleph Martines,& to the father Diego Farnandes, Prieftes, and to many others, these stones have brought greate profit helping them of emil diseases, which it woulde bee too long to write of. It is sufficient to say that they be stones of great vertue, and as a newe thing they take the in pouderiall fuch as have difeafes which cannot bee healed by medicine, and many thereby are recovered. Wherfore, GOD be praifed, who hath generathern fuch vertues, as

Ra

haug

Fel.66:

have byn yfed fince that hunting that I have fpoken of which were the first that have bin disconcred in the world for the vie to heale difeales: & we do trull that with them wil be done maruellous woorkes according as they have begun to do the & all this is owing to your workin feing that by your book we had knowledge to feek them, & to discouer them, & to take them out of these beaftes, which had them so hidden within them, that surely ther is much owing to your worthip, for disconcring vnto vs fo great a treasure, as this is, which is the greatest that hath bin foud in these parts, wherby our nation is much bound to you, & likewife al the world, because al men shal profitby the, & the reft of the fecrets which you have fet down in your book, which bringeth vnto vs great profit. And in recompence of the benefit which I have received. I fend here to your woorship a dolen of sones, by the returne of John Anthony Corfo, the rich Merchane, which if they come thither, your worthip may make experience of them , in many infirmities, for you that find great effectes in them, By the same returne also your worthin may adule me of them, & any thing that that please you to commandine, I wil do it as one that is most affectioned to you, because you are curious and learned, & fee doing to much good to the world, in those thinget which you have written & published, Heerewithall I fend you a fmall Cheft, in the which come certaine Frifoles, which you may command to be fowen in the beginning of Marche, that the colde doe not hurte them, which fend foorth a plant like vitto beanes, but fomewhat leffe, which have certaine vaines where the feed is, Halfe a dozen of them eaten with falt. & being of the tast of green beanes, they purge valiantly, & enacuate the water of him which hath the dropfie, without paynes. The felfe same effect it worketh if that they be dry, making the into ponder, & raking the with wine. & it is needful that meat be made in a redinessfor if they work to much, by taking more then they should be, with earing any

anything incontinent, the works wil confar it a sed the Alfo I fende you an hearbe , which groweth in thele An hearbe plaine countries, clounge to the ground like voto graffe, for the which is of great vertues for many infirmities, chiefly Renmes. for them which are grieved with Reumes and Fleumes in the throate, taking them away eafily with great benefite, and in this, & griefes of the head & Reumes chewing it, they do diffeume very much: they call this hearbe after my name, because I vie it for the like euils, for that an Indian did teach it me, which knew much of the yer-

tue of hearbes.

Alfo I fend your worthip a fruite of a tree which is of A fruite of a prest profit, & thefe trees be not founde in any countrie tree of great but in this they are of the greatnesse of an Okor of those verings. in Spain: it hath many vertues for the rinde, being made in pouder, and cast into any fore which is needful to bee made cleane, it maketh it cleane, & afterward causeth she flesh to grow, & bealeth it. And rubbing the test howish this pounder, it maketh the cleaned very well, & being hill vpon the gummes if the flesh be taken away, it doeth incarnate them, & if the teeth be loofe, it maketh the fast. Seething the leaves of this tree well in water & washing with the water thereof any manner of swelling, which hath any fore or that is therof cankered, it taketh away the fivelling, and impollume. And making some small linen clothes weate in this feething, & laying them warme ypon the medicine, which is laide ypon the fore, or ypon the pouder that is made of the rinderit maketh the fores to heale more quickly, causing that there come no humour to them. Out of the laide tree commeth a Roline, which is of freeze linel, and ferveth to perfame in many difeafes of the head. & to make planlers for many eoils, and heere I fend it to your worthip. Of the fruite the Indians make a certaine drinke, which is for them very healthful. Your worthippe may commande them to bee fowen, for I would be glad that they (hould grow, for it

A Tetter

will bee a thing of much delighe; for the profite that it bringeth in Philicke, and for the noueltie of the tree, for at al tymes it hath a very good finel. I brought into this country ablacke woman, which I bought in Xerez, de la Prowers, and there did appeare you her when we came hither certain olde fores in her legs, which were of long continuance, and comming to the Hande of the Margares, and beeing very forowefull for the fores which my blacke woman had, an Indian tolde me that hee woulde heale her, and feeing that the had no other remedy, I delivered her to the custodie of the Indian, that he might heale her for me, and immediatly he toke a fruite, which is common in that country, and at people ingeneral doe eateit; which is of the greatnes of an Orenge, &it hath a Stone like voto a Peach. This Stone the India did burne. and made it into pouder, for the flone is hard,& can not be grounde, without burning of it: and he call the pouderof it into the forer, which the had ful of much rotten fiells, and very filthy, which with the ponder were made cleane and very well, and it tooke out al the rotten flesh to the bone, and after it was cleane, with lint and a litle pouder laid too it, they began to be filled with newe fieth, vntil they were ful of fieth, and the was healed very wel. And it is to be confidered, that the little kernel of the stone hath so much venom, & malice in it, that if any person or beast doe eate it, hee dieth forthwith without remedie, as though he had eaten any manner of venom corfue as Sublimatum, or any other Poylon.

A cure with blood

In the Towne of Posco where I dwelt certaine veeres, abe freate of there was an Indian, which did cure the Indians and the Spaniards of any maner of grief or disease that they had, with anointing their lointes and the partes which did grieue them, with the juyce of a certainliearbe, & forthwith he wrapped the in many clothes, & they did sweate at the ioynts pure blood, And also in the fick part where he did lay the inyce, and as they went sweating he made

deane

cleane the blood with a Linen cloth, votil hee perceyned that they had forest fufficietly, & with this he healed sisny difeafes that were incurable, And I am able to fav. that many did thinke that they had wanted your againe, and were more ftrong and yong than they were before. Hee fel ficke, & for al that wee could do with gifter and faire words, and herce words, and threstnings, he woulde noaier tel vs what hearbe it was, nor thewe it solany man in this country. There is found a kind of tree, that is of loft Timber, the Indians wil make no fire of it, although you kil them. For that they fay, if any of them come neere to the fire that is made of this tree , or receive the smooke of it he remaineth impotent, for women. And they have this fo certain in perfualion, and it is fo verified, that you shal not make them to come neere the fire that is made of that tree, for any thing in the worlde, for they are lo carnal that they wil none of this,

They heale in these countries any swellings which are Centella, and in thee feete or legges, caused of colde humors, with an bearbe good hearbe called Comella, which being stamped and laid to for the swelling, there arise certaine Blisters, by the which long of the there commeth forth great quaritie of water & humors, feete or legs. with it leave the Foote, or the legge dry. I have seen experience by these cuacuations, among of the Indians, for they we them much, & I have seen some Spaniards who it and were healed of the lyke diseases.

In the yere 1568 in the Province of Chile, they did cut of fro certain Indians being prisoners, the calues of their legs, to eate them, & they rolled them for that purpose, & that which is of more admiration, they applied vnto the place where they were gpt, leaves of grasio hearbes, & there came not out a drop of blood, and many did see it. And this was done in the Citie of S. lames, in the profence of the Lord Don Garcia de Mendosa, which was a thing that made al men marriell at it.

There-

Fd. 68.

There are to be found here very fow hearbes and trees like sales thole of Spaine, for that the earth doeth not biggethem s but in the newe Spaine there are more of the methan in any other parts of the Indias. For when it Plantes like versitable of Caltile, and birdes and beatles libewife. We have here fnakes which bring admiration to fuch asies the for they be as greate as men, which are sor the most purco taine, & do no hurt. Here are Spyders as great as Oranges & very venomous. It raineth Todes us greate as those of Spaine, which the Indians doe cate d, for they are a people which eateal kinde of venomous beaftes. There bee to many buyeres, which breede in chany Mandes, that are in the fea , neere to the lande, that they eate up the Cartel, and fuch numbers of them that it is wonderful, and as the keepers of them be black fo they care little for them. One thing doeth make mee maruely that the kine which are bread in the moutaines. being brought to the plaine ground, dec al dye. I lawe a friend of mine that brought 200. Kine to be weaved, & they flaid a tyme before they were wayed, and by little & litle in one moneth there remained not one but al died. And that which is more to bee marvefled at is, that they died at trembling, and confumed, Some there be that do actribute it to the mountaines which is a countrie most cold, and it raineth every day, and in the plaine countrie wherethere is no raine, but it is hotte, and as they moue from one extremitie to an other they dye, that trulie is a thing worthy of confideration, to fee howethat in the space of eight Leager, little more or leffe, which are of laine grounde from the couff to the mountaine, by a long vale of more then one thoulande Leages, It never exincth in them, and in the mountaines it rayneth enery

OAober in this yere, there came hither a Cofin of mine, A gainst the called Alonfo Garcia, a good Souldiour, who telleth vs hearbe which that heh ath found an hearbe which is good against the the Indiane venomous hearbe, which the wild people do vie. Which des vie. hearbe doeth kil without remedy, and these valiant people of the Indias doe vieit in their warres. And likewyse those that dwel from the Charcas towardes Chile, and line like vnto wilde people, maintrining themselves only by hunting, and fleshe of mankinde, who have killed with their arrowes which are poyloned with these venemous hearbes, an infinite number of Spaniardes, which they say bee not good to eate, for that their fleshe is hard, so that when they kil them, they kepe them to wax tender, three daies or foure daies. But with this hearbe that is now found, the hurt shal be much remedied, that they doe make. How beit our people doe not much feare them, but only the hearbe which they shoote withal, for that it maketh them to dye by madneffe, without any remedy. And now with the recoutering hearbe which they have founde, they are al gladned. They fay it is an hearbe that carrieth very broade leaves, which are like to the leaves of Planten of Spaine: which being beaten & layd to the wound that is poyloned, kill the venome, and immediatly take away the accidents, which the venome of the hearbe procureth. They take it for a greate matter in that country, that they have found such a remedy . And you shal vnderstand that the couter hearbe was found in the same country, where the hearbe of poylon was: & I thinke it be also in other parts, but there where the hurt is done, our Lords wil was to discouer the remedy.

I note vnto your worthip thefe things, to the ende by them yee may confider, howe many more hearbes, and plantes of greate vertues lyke to those, this our Indias haue, which we have not yet attained vnto, for as the Indians are a naughty kinde of people, and our enemies, fo

A Letter.

they wil not discouer one secrete, nor one vertue of any one hearbe, although they should see vs dye, & although you shoulde plucke them in peeces: for it we doe knowe any thing concerning these, which I have spoken of, or of others, they are knowen of the Indians, as they be accompanied with Spaniards, to whome they doe discouer them, and vtter al that they knowe. I wil write no more, because I know not if this setter shall come to the hands of your worship, which if it doe, and that it please you to advertise mee therof, I wil write vnto you more at large, and of more particularities of this countrie, and of the vertue of other hearbes, and beastes, and other thinges, which I know wil give contentment to your woorship, seeing that you are so curious to know these things.

Our Lorde keepe you. From Lyma in the Peru the xvi.day of December, in the yeere of our Lorde. 1568. I kille the handes of your worthip.

Ebe new mieers following the fame ignozance that they fr is called are moont to boe in thinges which bee baubtfull, because the the blood of property of bem that is sout fullis to lay nothing aneto , bn. Drage be- . leffe it be that which is cleere and mantfell , for in boubtfull cante of the and harbe thinges they leave them as they finde them & have france which baried at one from another, as the ancient writers bib,but the is a Dragon, time which is the bifccuerer of all things hath revealed bato he, and taught be, that it is the blood of Drage. And the cause why it is so called, is for the truite of the tree, which caffeth from it a broppe, after the manner of blood, which is the fruite that wee haue fpoken of, a formet Dragon in thape as nature would bying forth, fo that it took bery plainby the name of that tree. For it is a common thing that trees beare the name of their fruites, by meanes wher of this marnellous tree receineth his name. And feeping the fruit which it carried was made fo perfect a Dyagon,it tooke from be fo many boubtes a confusions as we fee the old writers to have mitten of a the late mitersalla. And from bence forewarde me that be certified that it is the blood of Drage: freing that the fruite both gene name to the tree, a to the Bumme, a to the mon that commeth out, which is brought mofte excellent from Cartagena, and is made by incition, gening certayne cuts in the fame Eree. Elbich being a tree of muche greameffe, it bath the rynde bery thime that with any maner of thing it is opened, and like wife there is an other force mabe, but it is not lo good, but after the maner as the Eurpentine is made, in Caftile, for that it is folbe in Loanes, and the one is called the blood of Drage, of the moppe, and

the other the blood of Drago, in bread.

The vertue of the blood of Drago.

The one, and the other, have bertue to retapne any maner of the flure of the bellie, lapde uppon the bellie, or genen in glisters, or taken by the mouth. Pade into powder, it stateth the running of the head, and to the lower parts applied, in amp maner of flure of blood, it boeth retains and sanch it. It sovereth and gleweth woundes together, which be fresh and new made. It letteth that the teeth fall not out, and it maketh the slesh to grow on the bare gummes. It is a meruellous colour son pattners. And besides this, it hath many other bestues. I do meane to sow some of the seed, to see if it wil grow in these partes. It is thought that the blood of Drago is temperate, with little heate.

It is tempe-

Gumme to purge them which have she Goute.

There was a gumme genen bnto me which they bring from the firme lande of the Perm , wherewith they purge them, which baue the Boute in thole partes , thep put of it as much as a Mut into biftilleb water , and let it flance all the night in Deepe, and in the morning they ftrayne and wing it, and take that water, which muft be the quantity of two Dunces : and the patient muft remayne without meate, till the mibbelt of the bay, and therewith they purge the humour, which cauleth the Boute. I law a Bentleman mbo came in this laft fleete, ble it, which bee brought for remedie of this euill , who was full of the Soute , and with bling this evacuation, be findeth bimleife well , and the Soute boeth not come to him, as it was woont to bor, for that it came to him bery cruelly, and often : and be gaue mee as muche as a finall Quete , and mould geue me no more, and I gaue it in the order aforefaibe, to one which had the Boute, and bee bab three ftooles with it. I know not bow it will proue it were needfull to baue more quantitie, faz to proceebe foremarbe , in more experience thereof : but it will bee brought bither by others , as they have bone many other thinges. It bath a cood talt in the taking

are brought from the West Indias. Fol. 73.

taking, to charic both neichter finel not faueur, it maketh bis propie without paynes. It is hot in my opinion, in the first begree. I know not what manner of thing the Tree is, wherout they take it, for her which brought it, know eth not fo much himselft.

ate ofe ter ofe ter

The other manner of curing, which you have in that Ris The ofe of mer , is the ble of the Sarcaparilla, which grometh there, and the Sarcapar is like too Briers of Spaper , greate and thicke : the rollie. pences ofthem are the Sweeparlies, topach is Cometohat grofferthen matofite Hunduras, and is of colour a Lion town, and formewhat lab there be forme of the roocen fo large and berpe, char it is mertall to bigge the length of a man to get them out this Sarcaparilla, they ble in that River two manner wayes , the one is as the Indians doe ble it, and How to of as they bled it of olde time . Withen it was bifcouered and the Sarapa first bled as the Indians wid first ble it, they taught it to rilha. our Opaniartes, which is to take the Rynte of the Saresperilles, without the beart, and if it bee greene, it is needfull to lay it in mater, but if it be bie, it is neebefull en layir in water as long time as irrequireth to bes mabe fofte. In then there muß bee taken a geommintitie of it, ent afterwarde this Rynde of the Sarraparilles beryng greene Herr they doe of wateres , muft bee cut in finall peeres , and beaten in a make it, and Sporece, putting to it water in fuche logies that the tupes ofe it m map bee taken out of it , of the which they take in the mon Gwaraquell.

ning

ning as much as they can minhe at once, or at biners times. and after they call themfelues into a fweate, and they fweate lo much, that it renneth by the Bebbe in great quantitie. Alter that they take cleane cleathes, and cate of a Denne, but they brinke of no other ching but of that tuyer which they tooks out of the tynne of the Sarcaparillia, as well at Dine ner, as at Supper, and they mult cate bery little at Supper, a likewife at Dinner. and they must procure to keepe themfelues from the Ayse and from the colbe all that they canalchough in that Billage of Grangwill, wherein bee abo fifrie boules, or few more, the most of them are Cotogres. e of little fafegarbe , and the Ellalles be mabe of Cones , and there be no Chambers on high, but onely belomesthey bluel all in places of tietle befence. Being in chis oper and fmall comforte for lacke of Conferua and brie fruite , which were necellary, pet in eight or nine bayes they are made mbole of all the difeates, that are heated with the Sarega. fneake of. It is fufficient that there gee no Ban fram thence tobich returneth not mbole a sichough be hab nes uer fo greenous a bileale, fo that they bee not tharpe de geines : For in that cale the cure bath no place , or in any other tharpe bileale . All other bileales it bealeth with maruellous fucceffe, as it is feene by the great number of people tobich come thicher ; and goe away whole of the bifeafes, which they bying thither. But it is neebfull that be bebich both enter into this cure, bee ftrong and not weake, for if be be weake, be cannot fuffer to great Iweste, without great perill of his perion,

Another way

For these custles they have another manner of Mater, that is, taking spure ounces of Sacaparilla, tather more then lesse, so, that there they be nepther mappite not measure, but doe put all at discretion, and they take away the rymbe from the Sacaparilla, and dyeake it, without putting it in Mater, if it bec greene, and if

are brought from the West Indias. Fol.81.

if it be brie, thenthey breake it a purit in mater, butill it bea made fafe this rynd beyog without the beart, they feeth in 4. ettels of mater, little more on leffe, and they feeth it butill balle the tracer be biminifhet, rather moje then lelle : and of that Clater they brinke as muche as they can in many times, of at one time, and forthwith they betake themlelues to (weat, and although they fweat not fo much, as they fweat with the first tracer, per they will beale , they moue their clothes, they cate of a Bullet, they keep themselves from the colbe and ayre, and at Dinner and Shupper, they vie the felf Came water, for that in one vay they confirme one feething a chia people cake it in this manner fifteene op twentie bayes, o in this lost allo they are bealed of all their euils a difeales. to the ereat obmiration of the people. And for the ble of this Sarcaparillis they be not except any bifeals, bules it be levers on therpe nifeales : thefe people purge not at the beginning , as me boe beere, may in the minnell, may in the ente of the cure, for there is no other Phillelon nor medicine, but cerecappe pomen mbich be there, that gine the mater : they are momen Bhilitions, and put to as it feemeth good bato the

That which I boe note in this bufineffe, is that they feeth the Sarcaparillia without the heart : o that they ble not but of the rynde, which feemeth to be bery well bone, a berie conformable to good Whilicke, for the parts of the roots which bee harve, hould be taken away, as things fuperfluous , and mithout bertue e profite, which rather no let and biffurbe, that it cannot worke that effect which is belired in it, o the bertue is in the ryane : and this is that which we doe commonly ble tuben we will profite our felues byit. And fo from bencefortracif, when I thall ophaine this water for any that hous need how to make

ofis, I will ble the rynte onely.

bifperled. They carie a leafe like tache manner of Laurell. the flower of it is tubpte, accombing to the fathion of the Somer of Openges, fauing that it is fametohat greater . it is of a frieste limell. This tree pelbeth auch fruite, tobergformer it be formen, and boeth multiply and fypely fo much abroode that they take it to bee evil for the grounde where it grotneth, for that in many pattures the people box look the feeding of their cattle by reason of them . And they wene themfelues one tagither wich an ather like Bypers: the fruite which they carie is tike to our apples, of the great willt of a Dippin, it is greene toben ie beginnet firft to appeare, and as it riveneth , it curneth yeallows. In the inner parte it is tolyte, and in colour ruflet, and being out. hath foure places beuther, where it both the frene, which is linke to the feshe of Peblers, being hery harve, and of colour tatimic, al the flores within home no karnel, they are without any famour. Gud to content of Apples, they pare them from the Rinn, the finite in hollome, and of good bi bey be greene they are given to them that have the Luthe, for they reffraine am biane umeh . and when they bee bery type, thepmake the belly bery lapartice laben they besof a good fealonable age. They are good rolled to them that be whole, and for the licke, for beeing to roller they are more bealchfakant bester, and of pleasanter talle. And the best of them grotoe in trees which are tilled. The Intians ble the leanes in feething, with the which walking their feets that are fwollen, they cause them to abate, and the inner parts of the body being flope or opilaten , being wafte with

this feating, boe pilopilate . It feemeth to bee & colbe fruite, and therefore they give them: roftet to them tribich baue bot Se gewes . It is a very common frace in all the Indias.

Theshird parte of the things that

The description of the Cachot.

Lia they bit fente mee the Seete of a plante of hearbe, which the Antians bog much effectue, which they cal Cachor.

The Cachor is an hearbe beep revolth in colour, it carrieth a rounne leafe a thinne, it cafteth out a fruite like to a Berengena of Spayne, where the feete both grother

te is very finall, and of a Antiet colour, tehach a catte without any that profile, onely in the mountaines of Pers this hearte is found.

The vertues theref.

The Invians had much effecture it, for the medicinal vertures that it hath, it maketh one to pille well where the lack
of Appre is, it booth expell the Counte and October, which
grows in the reines. And moreover they for, that the life of
is north hypake the flour from the blance, if the Counce
ber faft, that they may bee differed, inch eating very licetic
quantities of it, annualities they have for many examples, that
they cante mee to marmell stric; because I thinke that the
from in the blance cannot bee expelled, but mely to cut it
mee in the cemenic, so, that no Iphilicke can villate from.
They far that taking the laste ground talth some water,
made so, the purpose, causeth it subsecut out in Clap, and
being come south it resurnes to be congried, and turneth it
fell into a flour.

Bifferie.

Only to a pong man A later this happen toho had a flone in the blatter, and A beeing certified of it by the Paifter Burgious that had felt him, and of the accidents which her had, caused him to bee carried at the beginning of the Bommer, and the Fountaine of the flone, and in two monethes after that her was there, her came whole from thence, and brought in a paper all the clay which her had bopped from him at tymes, being of flong diffelued into peeces. The will little the leeds, although bery little, onely to let the effect woodly

The tree that sheweth whether one shall live or die

A the pere of our Lopd, 1562. Called the Carle of Nieba mass in the Pere, he had there a genetlewoma to mas married that ferued him, a her husband maped sicke of a grievous disease, a an Indian of great reputation lering her to be in much soot, safe to her, if the mould know whether her husbande shoulde

line of die of that disease, he woulde sende her a Bowe of an hearbe, that shee should take in her lest hand, and hold it sail, son a good while: and if he should line, then the shoulde shewe much gladnesse, with holding the Bowe in her hande: and if de should die, then she should be than she had willed her to do: and the bowe being put into her hand, the tooke so much sadenses and soprothe, that she threw it away from her, thinking that she should have view thereof, and so be view within a sewe daies. It was destrous to know it that it were so, and a Gentleman of the Perm that had beene there many acres, did certifie me and sayd that it was of with, that the Indians did this with their sicke people. It hash put me in admiration, and in much consideration,

¶ Of the Granadillia.

The thirde part of the things that

they lent me, is of a rev colour, fomewhat barke, and it had

Of the Bezaar flones of the Peru.

Lichough in the lecond parte I treated of the Bernar fromes, that have been founde in the mountaines of the Pers, for that they have beene lent me by the first biscouerer of them, the best of as many as from those partes have come, yet I would say in this third parte some thing of them,

which he fent me for knowledge, faying: that because I wrote of them they had knowledge of them: and the books which I wrote of them, was the guide to finde and discourt them, as we have sayd, as he sheweth by his letter, which we

baue fet in the fecond parte.

Chole which bee lent mee too prooue bee berie ercellent in their coullour, making, and greatenelle, tohereof I have broken fome, and finde them as excellent as those of the Caft Inbia: and fo they proone in pouter, or in one little graine as the other Doe, and in coullout well neere they are the fame. Eruth it is that those which baue this qualitie and goodnelle, and have all the qualities that the Bezaar fones ought to have which are fine, thoulde bee thole that are taken out of the beatles , that are febbe in the Soumtaynes, for those which are taken out of them that are brebbe in the plapme groundes , are not fo good , not baue any Devicinall bertues, because the Beafles are not mayntapned by thole bealthfull bearbes , whereby thele flones are ingenbered , for as they bee Beaftes and chewe that which they eate of the tuyce , that proceedeth from the berbs, the flones are ingenbered. Wilhich thing that Bentleman gaue well to biberflande, bobo was the first biscouerer

are brought from the West Indias. Fol. 99.

of them, who bib fee where they lay, and were bee within the beaff, and with his owne bandes made the Anatomy of bins, and mot buto mee that the Bezas ftones are grow- Where thefe ing in thole beaftes, after the manner of a garbe mabe of fones dos fleth, of the length of two frames, little more or leffe and growe. of three fingers breatch . which is towned meere buto the Shawe of the inner parce, and in the garbe the flones are fet in opber one after an other, like butto button boles, in a coate, in this forme.

00000000000

And they oven that garbe of fielh being closed, and take but the flones, that furely it is a maruellous thing to fee. what Pature bath created there, for our bealth e remedie of our euils and as I have biberftoobe, that thefe which are brought from the Caft Inbia, be founde after the fame maner, fo I fpeake the truthe, for they bring bery many which are falle , that amongeft one bunbjeb there are not to bee founde temme that are true, and their topters of the Caft India doe confelle, that there be made many indeed which are falle.

The people of the Call India take them cut allo of a They of the certaine kinde of Boates, that bee for the moft parte rebbe Oriental Inas ours be: thep are the bell flones which are take out of p dias. cattel, which goe in the Dountaines of Perfia: and like. wife they take them out of other Boates , that goe in the planne Countries of Malaca, and thefe are not bab in frich eftimation , nor haue the goodneffe nor the bertues that they of Perfia have , because those Boates of Ma-Laca boe ferue for cattell to bee eaten, and they be not maincatned by healthful bearbes of the mountaines, as they that

In Belldente Feuers I hane given it many tymes, and In Pefislem furely it booth extinguishe and kil the malice of them, which is the principal thing that the Philitions thoulve procure in Feners. the linke bileales. For although it take amay the caule, and withmate the putrefaction, pet if it boe not extinguilly and take away the malice, the cure is never at anende. For that Note. is it which killeth, and both the principal burte, and where there are certain sportes in the body like to flea bytinges, inhich appeare in the like feuers, the Bezzer flone of our Indias boeth morke a maruellous effecte. De thole which they bane brought mee, I have frent the most parce, gining the in the like difeales, and furely they baue remedied many with maruellous fucceffe, e that wherin fome of them baue bene fpent by me,bath bene in foundings :and fur ety I baue feene in thefe fromes the effects to greate, that it feemeth a thing of monder. And efpecially I bave feene thefe caules more remedied in mome thenin me. It is a maruellous thing to be take, o it bath wought manifeft effects, o where there is aspelacholike humo, it both repaire it much, & both in it In Melen e in al things which Do refult of it, a great morke, be it bni cholike bamerfal of particular, in the beat, of that which they call Mi-morts rachia, and also in them that have the leprolle of the Arabions on Elephonesafis, of the Greekes. It boeth profit much in In Leprofie Scabbes, in Atchings, in Socuruinelle, and in all partes of and all infothe body, that are infected, it maketh a bery good boooke, flion of the and boeth remedie thefe euilles manifettly, for that this body. Cone bath propertie to beale them. I bane getten it in quarterne Agenes, and alchough it take notativey the quer-

Thethird parte of the things that

Agenes.

In long emils.

In quarterne terrierpet it taketh away the accidences of it, the faintnesse in Connelle, and the griefe of the barte, which in thele Feuers are common. Burely they feele with the wie of it notable profite,in al long and importunate bifeales. I bo geue it, @ they finde profice in it, chiefly thole which flaud in feare, of any malice of vileale, or windinelle, whatloener it bee. For I baue feene that in this tebath a greate popertie, and of this it commeth, that it is good to caft into pourges . forme graines of it, that if the Bourge beccarry benomous quas lities it may rectife them and amende them , and if not, it crineth force, and firength to the barte, and they moonke the better. In the opiental Indias they baue a cuftome to purge themfeines twpce enery pere, and efpecially the noble people of eftimation , and after they have purgen themfelues, they take euery mouning fafting foure graines of the Be-Acuftome of zaer flone , with Role water, or with mater mabe for the

Indians.

the Orientall purpole , and they lay that this boeth conferue their youth, and firengthen the members, and preferue them from bileales: and it is a good ble for it cannot choole, but boe them much good. For telopmes they gene this shone with most bappy fucceffe, and furely I bane giuen it to many people, and efpecially to Chilbren, and Bopes, that are tommented with this cuill, and I have feene fuch workes as are not to be beleeueb,if chep mere not feene. I gene it byis felfe, and allo mingled with this power, in this forme.

Ponders to be for the wermer, and al kinder of them,

I boe take hearbe Lambrigerathe mayabt of twelue mernelled at pence, the feede of Santonico the mapgie of fire pence, the Donne of a Darte burnet, and the feebe of Perdelagas, ant Carlina , of enery one the maight of three vence, and the Bezad Stone of the Parn, the maight of thes pencer of thefe thinges let there be finall 300mer mine, and let them bee wel mingles . Chefe Boubers are martiellous and of greate effect, to expell Illomes, andbery much experimented in many people, and they have brought in this cale

great

are brought from the VVest Indias. Fol. 101.

greate effectes, and they would be given in the mouning fai Ring au to the Philition thal feene gom, accopting to the age of him that thall take them, bling fome Webicine of Spilhe, and Buger theo boutes after they ber taken. And: buto children being ficke of it, wer gene this flone minglets in milhe, mo trichout it, if they bor facke, and if boeth a maruellous morkerand to them that be in yeares, by it felfe, of mingles with other thinges appropriates for the bileafe. Inconclution, we gene this flone in allong bileales, and impor tunate, where the ordinary medicines have not profited, in which it boeth manifell profite, and if it boe no profit, pet at can boe no burte.

acmie,

Dowloener & be, having in the Invias fo much Baves. and to common in all partes thereof . I moulde not eate Cafani, ferpag that the Spayes are of as good fubitaunce as our Colbente, and in no parte bath excher benome, of Majis poplon,but rather is bealthful, and maketh a good flomake. Chere is bread made of it, as of the Cafan, top they grinbe Bread of it, and with mater they knebe it, and in a Frying panne of Mani. Cart they bake certayne Cakes, which they make of it. and tr must be eaten frethe, affoone as it is made : fan bepng byp, it is therpe and trouble fome to finallate botune, and boeth ffembe the teeth.

Che Barara, which is a common fruite in thole Com Barara, tries , I take for a bittaple of muche Bubitaunce , and that they are in the misself betweene flethe and fruite. Erneth it is, that they be inpuble, but that is taken from them by colling, shielly if they bee put into line Clippe : there is made of them Conferna bery ercellent , as Sparmolate , ant fmell Popfelles , and they make Borages and Broches , and Cakes of them bery epcellent : they are fubiert that there be mabe of them any maner of Confermy and any maner of ments ther be lo many in Sepaine, that they bying from Volez Melaga enery yeere to Deutil, tenne of twelue Caruelles laben with them. They be fowen of the fame Plantes that are fette, the fmallett of them, m peeses of the greateft in the Carth that is tell tillet, and thep growe bery well,and in epght Donethes the rootes wore bepp groffe.lo that you may eate of them : Chey be temperate, and beeping rolles, on otherwise well, they lotten the Bellie,

Thatbirdepart of the things that

and beying rain, they are not good to ber caten, because they are topubie, and bare of bilgettion.

Of the Canes which are good for the shortnesse of breath.

Dep bying from the netwe Spaper great Canes, of a Cane that are congred within a without with a certain glimme, a to me it feemeth that it is mingled with the imper of Tabaco, at is beaup. It feemeth that the Cane is annopated, a as a thing that clingeth fall, it is changed well an the

fait Cane, and it is of a blacks colour, and having hard it cline geth not, they kindle the Cane at that part where the gumme is, and the other parte of it they put in the mouth, and they receive that knoke, and with it they call out from them all fleume and recrements, that is in the break; and this they be then they knot themselves, greaved with the Chounesse at winds, to that they be all ready to choke. I have frem it would by a Gentleman, who is much payned with it many times, and receiveth by it great profite; and oth it first with the Taker, taking the knoke of it, and it brought to him the like be nelle. Ind for this cause, I kay, that it leemeth, to carry with it the tupe of the Taker, using he with the one and with the other. It is done with all afternance, by that we be free it experimented with manifelt afternance in many.

For faintnesse or shorenesse of breath.

Some beeing licke of the thorenelle of breath, that come fro the Antias, with it A base feene expel, a call out this rot termes, by taking a little Tabace green, a chewing the inpension of it, the although it be locklome, it not show much good to be pellithe tottennelle a fleumes, which are retained within the breast

S. I Continued the second The state of the s

Fol.112;

To the Right Woorshipfull, Maister Edwarde Dier Esquier,

Iohn Frampton wisheth increase of all woorship with perpetuall sebense.

Inding heretofore, Right Worthipfull, my former translation out of Spanish into English, of the work of Doctor Monardes of Seuill, treating of thinges of the West Indias, to be some thing painful to me, not before accustomed in

Translations, intongues so fatre differing in phrase of speech: I was forced to cut of, and to leave three Bookes of the whole work vndone, dedicated vnto three honourable Persons whereof the first booke doeth shew as well the great and rare vertues of the Bezaar stone of the East India against poyson, hot, or colde, as also his woonderfull force against the plague and pestilence, and many other diseases: as bath in olde time beene written by the most excellent Phistions, and as Doctor Monardes and others the learned of this our time nowe in this age finde by present proofe. The second of these three bookes doeth open the vnspeakeable vertue in phisticke of yron and steele, and how all the diffeases.

The Epiftle

ester of the bodie from the coppe of the head to the foale of the foot may be cured by the lame lo as no drugge in the worlde is thought to be comparable to the fame. The third book sheweth the mischiefes that growe by drinking of drinkes whot, and what Benefite doeth followe by drinking our drinkes colde, &c. And Sir, finding many thankfully to take my fayde former simple tranell too you heretofore dedicated : and your Woorship about all defert of my parte too recompence the fame, and beyog earnestly and often exhorted, by the lerned Philicio Maister Dodor Hedor Nonc to translate their faid 3. Bookes allo, the remanent of Monardes works, & to make my Countrymen of England Partakerson the benefit of the fame, I tooke it in hand an inflamed with the great commendations that this Learned Man made of the fayde three Bookes, and especially of the Booke treating of the benefite of yron and steele in phificke. And having now thus finished the whole work, I dedicate the fame to your woorship as to the man to whom I am most bound and that doeth of many best descrue the same, requesting you too take it in good part & to beare with the basedoing of the same. And calling to remembrance of what moment in fomtimes A man of value may be to a common Weale, and howe common in the worlde the practize of poylonis, & what malice raignes now among men, & how needful it is that some kind of persos sould feare & prouide for the worst, and

and weying that by our Persian merchants and by other meanes the Bezaar stone this great Iewel is brought into the realme, and may be compassed in this our tyme for a litle money: And withal, weying that Iron and steele be things tending so much to the cure of al diseases, and beethe natural home commodities of England and such as are commo, and that are both easily and cheaply to bee had by euery poore subject, I have the rather for the ready benefit that might ensue, taken the dispatch of the translation in hande with purpose no longer to keepe the same out of print: and so I most humbly take my leave, from London the my. of June. MDLXXX.

bemayle him begroof: in that folietle a Peacle can obfende him, and so finall a fruite of flone may befrom him.

Against at these benomes as well in general as in partienter, the philitions as wel Greekes as Grabiens e Lati. niftes mote effectual remedies as hel generall as particular. Amongett che tobich thep put one in practife , that in tymes paft was hab in greate eftimation, and taken for a prefent remedie, for the greace bermes and meruellous effectes , which it inpought against all benoms and acci-bentes thereof, which they called the Beauer stone . But as tyme is the discourses of all thinges: so is it the be-Aroper and confumer of every thing: for in bauing bene bin fo long from by, wee knewe no more what the Bozas frome mas, then as if it has never beene: and the name thereof mas fo ftrange and buknowen bato be, even as the Colones in Scitia, Time it felle willing coreftope agains been be this specious flone bisten from bs fo many yeeres not onely bifconered the fame buto be hut toincly therisith bath beferies ante be an bearbe, which bach the lyke bermes and effectes against all manner of benom, which bearbe is called Efenercenera bening bene bifconereb but a feine peres paff to but exceeding great profit and commobitie.

And because these two thinges, to init, the Bezaustone, and the Pearthe Escuercenera, bee so lyke in operation, and have so many and the selfe same betties any gainst benom, that I betermined to uppte of them both together, and to shew the proper betties of these ewoo thinges so excellent in medicine: it is needfull first to know, and therefore create of the benomes as a beginning of the wooke; and to beclare what Elenom is, and the cause of such as have taken Elenom, and then the remedies thereof, and howe they may bee preserved from

them sand therefore we will treate first of Elenom, for that it

The bearbe Escuerconehalf ferme moe a little for the incent of that habith for minbe to

mite of the Benar fione , and the Deathe Efeneremeria. Clenomis a thing, which beying taken at the mouth , of applied sugmertip, beeth sugresme our boties, by making them licke, as by corrupting of them, as by hilling themsand this is founde in one of these fours thinges, in planes, in uni-nerals, in beatls, or in mixtures, the which morbeth their es-fectes, eyther by manifest qualitie, as by historn propertie, or both. These beams partly box hill be partly two ble them for our profite, and bottly health; and partly the people of atmetent time bib ble them for a remedie against their great labours. That which boeth offent be no well in generall, as in particular, Dieferrides in his firth booke of his hillopy of Plantes boeth treate of bery exactly , putting in generall Dieferider, thefe remedies, and in particular, that which is consentent for every one of them : and the fame bib other Greekes, Lamittes, and Arabians, which are to be ferne, who will more particularly know of them.

These viv mice of many Pevicines, with the which energone may preserve themselves from poplon : so, the malice of mankinde is very greats, and many have procured for their interest, and renenge, not onely with benome to offende and kill the common faste of people; but also Emperouses ; Kinges , great Princes and Lords , the which in how much . more bigh effate they are appoynted and placed, formuch the

more baunger they are in.

And many nocable men of the olde Waiters fearing this, bib compounde many and biners Webicines, that by meanes of them they might not bee burte by benom of benemons thinges that might be genen them. As fin example . The Emperor the Emperour Marco Antonio bib ble luche thinges, who Marco fearing to be popioned, tooke enery morning a little Erla-Antonio. tica, other times certapue Lemes of Rue, with Buttes and Figges ; and la they bit ble the like medicines because they

Clenome mbich

29/29

Of the Bezaar Stone and

entilutere and outbach burning , chat it fermeth to them they are fired.

To knowe what venome it was,

It is also necessary (to know what benome they tooke) for too see the bomice, and what they was cast by withall, to subge by the colour what Clemme it was: and beeying knowen by this way, or by Relation, or otherwayes beeying apparaume, it must bee remedied by his contrary, so to estinguish and kill the matice thereof, as all the auncient positions have sufficiently unitten of, as well in generall against all, as in particular against every one of them, so that every one hath his contrary effectes so to remedie the malice thereof.

Emil fignes.

The tokens that her molt endl in them that have taken Clenome, be often fountinges, and to east by the white of their eyes, they bee mare very red, and put out their congue bery great, and blacks, and the pulle fall, coide fineste industrially throughout all their body, chiefly to the extreeme parces, and in their brettes, and they are believes to bomit, but cannot, and they have their buserlanding troublen rime this is in al kinne of benom being taken on by bytings of benomous beattes, in so much that they talke yelely as though they had the frentle which is a mortal figure.

To knowe what venoms a was.

It is needfull, for the better knowledge what Clenom it was, that it bee feene if there bid remayer any thing of that which they had eaten of vronken, and to fee what was that which was mingled therewith, imaging it by the colour, the finel and the taffe, or graing it to a Dogge, a Den, or a Catt, and marke howe it woorked with them: For if any of them wase factor or heavie, it is a token that there is benom; and if they tree, it is a token that the benom was frong.

The care.

And being knowen to bee benamed the first thing that is to bee procured, is, that her which is siche doe bomit, which is the thing that boeth most profit, bycause there should be no tyme so, the benom to enter, by the vagues, and arteres, so, so come to the hart so, if it come thicher, it is past all mans being,

to a Beringena which is a fruit of Spayne, and the flone beingbrought, not a little to our contentment, every one gave cheir indgement, & it was agreed of at fuch time as be (bould fownbe, it (boulde prefently be givenhim: and the fownbing being come in the evening bee toke foorth with the appoint teb of ber, which was brought from the court, that hee fouli take faosthwith the waight of three graines of the pouter of the flone, and it thould bee caft in water of Dretonque la much as might be lufficient for bim, and lo it was bone. Dpening his mouth bee fivallower it bottone, the which be bin with much bifficultie; within the space of halfe a quarter of an boute, after bee bab taken it bee recovered as eafilie . as though bee had not had it. And feeing the bertue that was in the flone, wee bid elleeme it much and the more for that wee Came that every tyme it toke him, be came to himfelfe fo cafilly and when be toke not the frone, the founding bib continue long, and bee returned from it with greate paynes, and in long tyme it leafes nots but when the flone mas ginen bim became quickly to bimielle and with greate ealineffe, as though he had not had any fotonding at all . Wy Laby the Duches carieb the flone in ber purle, and hab the quantitie that be thoulde take alwayes in a readineffe, because twhen the founding came to bim, it might bee ginen bim with more fpeebe, bycanfe bee foulbe not bee long in payne: fo that from the tyme that bee recepued it, bis foundings came not to him to continually as they bib beloze, This being perceined, I faibe one bay to my Laby, that it was the bottine of Whilitians, that the medicines which boe not beale bif. eales, cannot melerue that wee fall not into them, but that it Ceemet good to mee that wee thoulde give buto bim enery morning the power of the Bezar flone, that with the contimuall ble thereof, the bapour might bee confumed which bis rple by to the brapnes, fothat what feemeth to be benomous and burtfull, the flone woulde extinguifh and kil, and would confume the bapour that rifeth bp fro all the boop, and from forme

Of the Bezaar Stone and

forme particular member, the roote and originall beeing taken away of the difease, he thouse bee heated, so every morning is was given him fasting the waight of three graines, of the power of the stone, with the water of Dytonguerand it pleased God that it should worke so effectually, that from the day that he began to take it, dutill he dyed of another difease after, which was more then y, yeares, there never come to him any soundings, the which stone her toke bi monethes togisher, and never missed day.

Historie.

This effect being promet is great and manifelt, I bauing in cure a poung Gentlewoman calles the Laby Maria Catano and may licke of certaine lawnbings of long tyme, Deeting in cure by learnes Philicions, ber bifeale of foton-Dings was perillous for that it beld her ten or xit boures and thole were well neere enery bay: thee was in fuch cafe that many bayes the role not from ber beb . I was called to ou ber leing the finall belpe that the other Philitions hab bo to ber; I bio not medis bilth the common medicines tobich other Bhilltions bab bles many yeeres : but 3 caules tobe brought from Lilhebron a Bezas fone, and after thes was purged, I gave it ber by the oyder aforefapte: and from the bay that thee began to take it bottoo this bay thee never bad more foundinges, which is more then twelne perresithere was frent a bole flone as great as a Date.

Sliftorie.

In this tyme the Doctop Lewes de Cueus, a man learned in his facultie: as her was eating, butwares a benomous thing did put him to so mortall paymes, and was copmented with such accidents of benom which he had taken,
that it was thought bee would have dyed in short tyme: and
although hee tooke bomittes, and treatle, and other rentebies against benom, when I came to see him, hee was so
evill that there was little hope of his lyfe. And as Il
same that his disease proceeded of benom, and the little

belve that the remedies which had beene given to him bib : I my felfe went to feeke for remedie which was the Bezaer ftone: and beering ferchet for, at length was founde in the handes of the lapbe Laby Mary Catano, for that the pouter of the inner parte of the flone remained both ber: and thinking that thee thoulde not baue caken tt, thee kept it, the which I tooke, and it was about lipe grapues of maight, and I beutbed it into twoo papers,and greatly to his comforte I founde remedie for bis griefe . I returnien co bis boule, and founde bim as full of payme as might bee, I gave him foorthwith the three graynes of pouter that I carried in the one Baper with the unter of Dretangue, and in the fpace of baile an boure or leffe, bee toos marnelloufly ealed, in fuch lopte that when night came bee was in good bispolitis on, and out of baumger of beach, which was so neere him, in fuch loste that the next bay in the morning bee remayneb well, for as much as touched the baunger of beath, but he remayned in fuch forte that in many moneths bee coulde not throughly ouercome the great suil which bee hab peff.

The fand Doctor Lewes de Cueus going by the way with Hifterie. a Lord a bunting, one of his pages being a tall poung man, Lapbe bim bowne to brinke of a poole of flanbing water, being nanghe, and full of benomous weames, and after hee bab bronke it, bee felt bimfelfe fo cut, and in fuch force, that hee coulde not mooue from thence, and his belly fo fmollen, and all his body in to greate a fayntnes, and fownbinges, with greate bomittes and Iweate, that they carried him uppon a boyle to a Clillage that was neere at hande, and after they bad made fome remedies for bim, they gave to bim the Bezaer ftone that his maifter carried with him for the lyke purpole, if any thing thoulas happen, and it bib bim to much good, that the next day he was able to topney

with his mailter.

Q Chilbe bib eate a certaine benomous thing, bebereby bee was in banger of beath, and feing that the common remedies bib not profit. I caused to bee given to the childe the Bezar Cone and immediatly it was well. And for children that have mormes,it is lykewyle bery good, for that it cause ferb them to be expelled by villolation, meruelloufly taking away the accidents that are wont to happen to childe. And this it was keth wherefocuer you feare any ariefe or benow mous humour. In the thinges that it bath bone moll good, bath bene in the pettilence, for that there was in Germany a create Blaque, and page all fuch as hab the Bezar ftone giaen them, immebiatly mas feene the greate effect that it bib in them that toke it. And in an Bolpital were foure perfons infected with this evill, and it was given to two of them and not to the other, and they that tooke it escaped, and the other twoo byeb. And then it was given to many that wereinfected with this entil, and fome of them had twoo lozes, and forme had three, and ver they elcaped and of this were witnelles mam people of greate credit that lawe it and other meaner perlons as it is bery well knowne to all the Court.

For them shat are fad and welanpholice

This stone boeth profit much to them that be say and melancholike, the Emperour toke it many tymes so, this effect, and it is taken of many persons that are melancholikes so, it taketh it away, and maketh him glad and mery that be seth it and to bee of a good disposition. Hany I have seene that have beene much disased with sayannesse, soundinges and melancholie, and taking the waight of three graynes of this stone with the water of Driongue they have bin healed presently. In severs of an euili qualitie and most pestileue, it is meruellous the good woorke that it doeth: so, that it taketh away the malice thereof, ertinguishing and killing the euil qualitie of the benom, which is the sirt and principall thing that the Phissician should boe, so, it that this bee not gaken away stril the cure is in bainc. Pany do ble this stone

De Derbe Escuerconera the which mee have promifen ca weste of, is an herbe knowen. and found within thefe thirtie peeres. for time hath Difcous reb it too be as it bath bone many other thinges, as wee fee which they bying from the Well Indias, and thep ate fo many thinges, as wee fee e

wery bay, as were never feen by thofe that were before be, nor per by be ag me baue mitten of in a Creatile that me mabe of these things which doe treate of all the things that thep bring from our Indias that boeth lexue for the ble of me-Dicine.

So it is that in the Countrie of Caralnina in the Coun. Hifteria tie of Vrgell in a towne called Momblane , was the place where y berb Escuerconera was first biscovered a found one. as al that countrie is moletted a toubled of certaine beno. mous beaffs.

Of the Bezaar Stone and

beafles tobich are called Elemerer, and likewile of many other and alchough that they are very Clenomous and full of poplon, there are allo many in number, as well in the tilled fields as amongsil trees, and graffe, and especially in the Coppe fields, in such lost that they are to them in treese of a pringue, and an uncurable mischiele, by reason that the people cannot labour in their Clines, not reape their Coppe, not not their bullfuelle in the fields, by meanes that they are so cruelly burt by them, whose venome and poplon is such, that wheresoever they byte, it swelleth soothwith, with greate paynes, and the swelling rises by in the hearte unmediatly, and if they be not remedied and suchered soothwith, they bie presently: their Triacle and other benefites which they had, bit serve them to little purpole.

How this borbe was discoursed. And feeping that in this time this Plague was so without remedie, it somes that they brought to that place from Africa a poing man Capture, which divided them that were bitten with these to benemous beaftes, with gring them to eate of a roote, and the inpec of an bette that her knowe which did them so much good, that it beaks the betinges and poplon bery easily. For the which there came so many people to the Poope, that they did not onely make bim free, but also rich, and the poung man in all this tyme with all the promises and giftes that they could gree and make bitto him, would never tell them what roote and berbe it was, wherewith he healed so great a Plague.

Emo Persons of the Towne beeping very bestrous to knowe the same, by reason it stoode them so muche byyou too knowe what Herbe it was, went after him any
aogged him so politikely, that at length they sawe where
hee gathered the hearbe and tooke out of the grounde, the
rootes thereof. The Poope beeping gone, they wente
soo the place where hee gathered it, and they sounde the
lacks of the grasse that the Poope had gathered, of the
which

Diffile

biftillet, it is a very good remebie for the laybe feners and to foundinges , and Spelancholies of the bearte. In all partes they ble at this tray the mater billilled , for finspecies Feuers, winking thereof continuelly, or mingling it with Condiali marers, they toe geue the Conferna and the mater together many bayes , for to beale opilations of the Liner, and tigbees, and the inner partes, and for momen whole flowers boeth not come apterly , and for founbinges of the beart , the manner of this berbe Escuerconera is very fayre, and beautifull to beholve whereby ince gather it Coulde bee good for many thinges . 'It is in beight, the length of a many arme from the Clothe too the banbe , little more on lelle , it bath a leafe like to luckopie when it is bery muche growne, but it is fomewhat broaver, and fpreabeth much abroade by the ground, The figure of te is long and at the end tharpe, in the which there is a ft. The pewer aneme that groweth up to the coppe the Colour thereof is a light greene, and boeth cafte out many braunches, beeung rounde finiall and barbe, like too tolood , and in the highest queto of them they catte out certayne long. bundes full of counte mineroes with forme poyntes like to tert) and fomermag like too Gillowe flotter butter. In the Poneth of Pay there commeth out of thefe bubbes certapne flowers berp muche laben with many leaves, and beeping allopened sthere appeareth a greate flows er i and route anachein Lennes bes gelleine like too the fireames of the dome is it is a bery fagge flower con behate : in the eine of June the leaner chereof Doe fall and the bistors became roumbe ichere boeth come from them many counte rooses to Chuinges , that grape counte as bone chem , which themeth very well in the ente of the Simmer & Jin the farall comes that one remaine are the Sateria de geartig god fered gelenen set. & 31 feber

sered me and a single mater amount

Feling.

Of the Bezaar Stone and

leever) and the leeve beeping gone, then the Leaues of the Plantes doe fall. The Rocce is like too the roote of a Sanabora flethie, and maightie, and leaves with a popul, and wopeth greater tabardes the leaves, it bath a thinner ryside topics coo the roote; and is of a ruffer colour, somewhat blackilbe, and lowewhat sharpe, and beeping cut of backen, it booth cast from it a cereapine clammic watersthnesses, like to nisthe: it is all white within, sweete, and factle, it groweth so the moste parte in billie places, where some moisture is the complection theroof is what and more six is the first begree.

The Clercues that it bath ber fuche as wer have fpoken of, the principall bertue is agaput the Elemen a beat to benemous, and booth to much burt, that in this firelieit fremeth to ber a thing of great bertue. At is good when the tupee is taken our of the Leaves and clarified, and that the roote also bee taken, which is a thing of greater bere

tur.

And it is to be conflored that although you take the inpectant the roote of this Herbe agaputate. Poploathat proceeded of this heat which is separations, trisconcentent that given beligines be using as we have alone above laybe, so, the remedie of them that are becomen, where by it would be very well that in the means time that the street been a presisting on the Roote of the laybe. Detre, that some by the singer spears whom shows the laybe if be beinde land by the singer spears whom shows the laybes of the foliable land by the suggestive above the laybes of the beinde land by the laybes of the book, and this is to bee bone in the Legge of arms. And if the byting bee in giplinthe place where it cannot bee bound, then there will be latter costs, platsfers of the man strong things that this willows the little the latter of the man frong things that this willows the little the burt boe enter the inner must be some with speed, before the burt boe enter the inner parter, so if it once boe come to the hatte, the cure will goe harde;

barbe : and this must bee bniuerfally in al paickinges or bytings of benomous beafles. Ind if the wound bee (mal itis need ful to open it, with a final cut of fome other way; and if it be newe, let the cuttinges bee fmal, and if it bee of a long tyme, then let the incilion bee beepe, log that with the much blood that goeth out thereof, there goe out a greate parte of the benom alfo. And after the cutting let there bee applyed fuch things as may brawe out firongly the benom, fill abbing thereunto that as that be neebful, Some there bee that Doe fucke out the benom of the patrkes or woundes with their mouth, but it is bang crous to them that fo boe, for feme baue byed therofit is better to remedie it with bentolities, on to put too it the binberparte of a Cocke, on a Chicken, on a Higeon beeing aline, bypon the paicke, or weunde, the ferbers being plucked from the hinder part therrof, and ble it to often as that bee needful, butill you perceive that they baue taken out the benom that is in the wounde, and euerp one of them must be applyed thereto fo long tyme butil that you may perceive that bee boeth ware faynt, of butill be bee reable to bye, Allo it is a good remedie to put them that bee a live opened at the back, and let them be there as long time as they have any beace: and beginning to ware coloe, then take them away & put others to, and the benom being taken out by thefe meanes, let there ber put bpon the wound a mebicine that bath bertue to keepe the wounde open. Some bo ble in the cuttinges of incilions an actuall thing to burne, called a cauterie, which both bery much good, extinguithing the benom, and comforcing the burte. The fame effect borth the cawterie potentiall in killing the beneme , but it is not fo good as the actuall, but thereby it boeth cause that the mounde boe not clofe , which is very necessary for the

The impre of the herbe Elevergonera doeth profit berp much, being put on benomous optings of prickings, by it L. 1 3.

John Odoricus Mechiorius an Almayne 396ificio poch hupte in an Epiffle to Andrew Mathiolo, faping that Peter Carnifer a Catalan Bhilition, fent to bim the berbe EL cuerconera byp,into Cermany : this Philition bib afke of Mathiolo what herbe it was: Mathiolo bib not know what bearbe it was, neither bis any other butil now that it bath bin fpoken or written of. Some that are curious wil far that it is the Codrillia a fpice of Buccopy which Diefcarides both make mention of in the fecond booke in the 122 chapter: @ although that it bath fome likeneffe therof, it Differeth much in the roote: for the Condrillia bath it bery moonnie and bre profitable and bery fmal, and inthe flowers: butthey biffer not in their bertues, for both of them are good for the by tings of adders. and whatforuer that our Escuerconera is. wee fee that his effectes are greate, as well againft the bytinges of the Escuerços which is so cutil a beaft and benemous, as for other difeales which we bane fpoken of tobich feeing that in to fewe yeres there bath bene fo much thereof bilcouered. I bo truft of much more mil be bereafter by mile men, that there may be abbed to this which I baue biscours red and written of it.

And feeting that we have treated briefly and the best that we can of these two medicines so precious, to wit, the Brace flone and the heathe Escuergonera, which are two

things.

Of the Bezaar stone and

things to precious and of to greate effectes against benon! mem have we to treate of the last parte which wee promifen so Doe; and both the ought to keepe and preferue our felues. met to falinto fo greate a banger, as of them is beclared, for that it is better to keepe our felues from parmeer, the to fall therein. Deerein the ancient unyters have bin bery circumfpect. Amongeft the reft it bath beene an ancient cuftome in Brinces Courts e other greate effates to bane their taffers as wel of their meate as of their brinke for the elchewing of poplon, and to by the meanes thereof they affure themfelues to be out of peril for that matter, the which furely is allowable and a good cuftome, and necellary for the lafegart and health of any 19 ince or Lorde, for if there be any burte in the meate on in the winke, it that light first bypon the that Doe eate a) brinke thereof, and not byon the Brince of other bigh effate, in whole life and bealth greate matters boe bemembe.

Trueth it is that in thele bayes it is bone more for a ceres mony and effate, then for health a lafety of life, a this order is bled among t great effates, more for cuffome then for any thing elle, for this purpole the common people have it in effimation, to that at this prefent it is viet contrary to that end and purpole it was ment, for they ble nothe taking of a little byed and bringing it with the meate and fo talle itimae Done, they call it away , and lyke wyle they brinke a brop of toyne or mater:p if it fould be bled as it ought to bee, they thould eace and brinke thereof throughly, for other twile the poplon,if chere be any,canot be bilcerned before it come in to the Princes mouth, Allo the lood ought to command that chere be prepared for him divers meates, for that if bee millpke of one, be may taft of another: for being of biners losts be may talt of eache a little, and eating little at once of any that were infectes, it would boe leffe burte then if he foulde eate of one with being infected filling bumfelf therwithal, for being either of them infected and eating much therofit that

Of the Begaar Stone and

when the benutires come of cooling thingred, w that feele a nocable thurpenes, and they byte and burne flight-with: the best is fig them that have fashician, to eare meate abort is reflet of foo, a that they eare neither byothes not pooeages, for in them there may be greater butterant if any bee made, let their nee ber made with things of finell, as Am. her, mulke, and fweete flyces, and let them not bang onet. struch (harpenes, for in broth or portage, the poylon wil losmer lurke then in roffed op forden , and ble no meates, which have much fweetnelle, therein all poplon will furke the more. Der thus hach any fufpition when her goeth to big thence let him not beech greenie to sate foorthinth very ffily but lethim refraine himfelfe, and let bin ente with les fure,bp little and litte. Che fphe be mult bo, in big brinkin being bery chirfty,bee feeleth not tobag be byinketh: and many people beeing bery byp, hade bjonke inke, fpe, and afte mater of arlemke, not feeling the fame butil they have butt Their boop and therefor Hils convenientebeto brinke leyfarety by litte, and tiele, talling bis byinke as by byinkerh : hereby it men moulde be ruled by this oper, they thoule easily time if there were any emithing in that they rate, and bytinke. Pott baue to confiner the colour of pour meate, for thereby will famewhat appeare. For in wil looke other wyle, then it ought to bor, fee that your beffels mberein you eate of prinke bee cleane, newe, and gliftering:and if your abilitie be furb, let shem bee of filmer, being cleane burnifhed, for if you bane benom in the brinke, it is callip elpied, and the liker both turn blacke on talunep. at a of attach a too attach and ga

Hiftorie,

Procument bapes pall a Gentleman of great riches, be brinking in a platne cupped filmer, percentied the cup they not of a fab tammer coloat, and the market thereat, be only taffed the worst, and it made his tongine rough, a his mouth alfo the londer melon the toposithe was put into the cup, a it hapment hat quickness in a planning that is ought as have had not be looked on the tagger; and in the bottom's of the land.

etme there were many graines of arlenpke, thas yet were nor biffolied. Twas called a I gathered out of the ewie more then re. Imal graines of arlentke: within certain bares after the Gentleman fell ficke, wherby 3 Dib conjecture that it was not the first tome that they pretended to poplon bim: @ ance that, be bath bin ficke a long time. And thus much I affirme that if the cup bab not bin altered of his colour a bin infected it bab not bin perceined. Therefore it is nece flare that the bellels and tinages where wone ? water are kept. be Clope, for feare leaft any benomous thing fall therein, as Ippbers, Ballamanquelas and other lyke benomous bealls. and therefore it is nought to brinke with beffels or cuppes that bausmacrom mouths: for it is beft to fee what one bain. keth in a cleere bellel and broade, for it is good for them that Do regard their bealth. It is good to have a prece of a right Unicomes borne in a final chepne of golde, that it may bee futllet continually in the mater that fhelbee bronke . It would be well for not onely it taketh away the fulpition of the benom, but boeth put to the brinke a meruellous corbiall bertue. Allo you must not stand by the fire that is made with benomous wood, for the limoke boeth poplan, as if you fould cake porlon, and to let in the chamber coales when they boe begin to kindle, many baue byed therwith : let pour apparell be kept by fach as you baue truft in, for in them may bee put things that may bo notable burte, and for al that, as is laid, it boeth much profit to have cruftie fesuants, and that they bee fach whome you may truft, and that they be of a good pacentage, and flicke not to reward them wel. And about al o. ther let the Bulltion that bath the charge of pour health, bee learned and experimented, bilcrete and of a good judgemit. and that he beriche and of a good kinred, and beeing fuch a one, he wil not boe any thing that he ought not to boe, feing that in his bandes is the life and health of the Wapfler and Lapte.

An Epille.

Duke of Alcala, &c. my Lorde, the Do-Gor Monardes your Philition wi-

Orasmoch as the metall called yron, is of so great impostance in the worlde, and so pecessary for the service of man, it moved me to make this Dialogue, which doeth treate of the greatpesse and maruellous workes thereof. Which if they be well considered, they will bring admi-

ration vnto all that shall reade them, by reason it is so neceffary for all states, and manners of living. It hath also greate and medicinall vertues, and likewife with worthineffe, and greatneffe, it is an Instrument and meane. whereby the most worthy have gotten great Titles, and fame; as we fee many of those which in times past have attayned vnto, among whom the Predeccifors of your excellencie with theyr noble mindes, and strong armes, the Speare in the fift, and the sworde in the hande, by opercomming battels, by getting townes and places, the name and fame of them have byn immortall to this day. And for to augment and increase this the more, and to gene to your excellencie, and to your children and fucceffours , greater glory , you tooke to wife the excellent Duches the Ladie Inana Curtes that at this day doeth beautifie the whole worlde, with her woorthinesse, estimation, qualitie, and greatnesse, daughter to that valiaunt and renowmed Prince , Don Fernando Carrer, who with his greatnesse and infinite Labours conquered

Vrgus. Etherein boeth maiter Doctor goe niuling e flus bying lo, that he feemeth to be Hipocrates him leffe, as the othe uniters have painted him out! Doctor. On a firke perfon that I go to bift. Burgus. Is it needefull of so much care before he be feene! Doctor yea long before, feeing from my

Suppe I has great care of bim. Burgus. It is a thing of greatlabour, pou baning fo many fiche perfones as you als maies have that you must studie every bay the case of every one. Doctor. They are not throped all every bay , but fuch as have mod neebe , and bo alke every boure netveremebies, as in tharpe bifeales, where neede is of care and biligence, subereby the occasion of the cuill map the looner passe away: for those that are long licke, as the benefites that thoulde be Done to them by leafure, and by little and little, the flubles of them are after the fame manner. Burgus. I went als fo thinking bowe I thoulve fee in the Contratation boule, whither I nowe go, the great quantitie of Golbe and fluer, which they have nowe brought in thefe fleetes that are nowe come from the Indians, and efpecially certeine Emeralbes, which they have brought from the newe kingbome : For it is lapbe that three of them are month three fcore thoulande Ducats, and as a rare thing neuer feene in thefe partes . Il ment foorth of my Pottearies thopp to fee them in the Contratation boule. Doctor. And Jalle bo go thither to bis fite a ficke perfon at the treafmers longing : it map be that there wee map fee them, let be go in at the little gate, for it

The Dialogue of fron

is a thorter way, and fewe people will be there. It feemeth to mee, that the greate hall of the treasurie bouse is thut: it may bet that whiles I go by to fee the ficke person, they will spenit. Burgiss. Your worthip may go in Gods name, I will carrye here sor you, and seeing the great hall is not opened, I will litt bowne bypon the beache, and will see

lab at boeth paffe butill you count .

Doctour. Mafter Burgus, I praye pou parben mee, if I have correctiong : for the qualitie of the cause both cau-Semmes to tarry . Burgus, Rather I moulbe hane beene giat that pou bat tarryet langer , because 3 tooult haue feene moje . Doctour. Elibethaue pou feene whiles 3 mas ablent' Burgus. Che great hall being thuet, and the parce full of people; and I looking uppon them earneftip, it feemeth to mes that they are people of ettimation, but to um inngement full of cares : for in them 3 haue feene fo bastable and biserfe likenettes of countenance, that I maruel at it. Some of them talking to them felues : others being. alone with their beans hanging butter , and with great imagination : Others talking by two and two together t Debers in clufters treating of the lates of their merchaum Dige: Paryners and foulbiours carrying for their pape mentes: Debers carrying away their porcions of filmer, lubich they had taken out, running with it, as though they hab folenit : Dibers there were with the Motaries about their laites a Dibers in the office of the treafourer amongelt the Regifters . There mas allo a greate nople of much people, belivering and receiving parcels of filuer, but thep were in a great firife theresppon. The Junges were in counsell, and mamp people tarrying for them in luch fort, that I was in greate abmiration : I being there onetyso bebolve, and all the reft to bo their bulineffe. And it was to mer as one that bib beholbe them without greete, as a. sometye, with many BageantaAnd that which viv make mee maruell more, was to fee that none were merrye, nor content : rather they feemed to

bane great care and troubles.

Doctour. Paffer Burgus , 3 am glab pou baue feene buhat boeth paffe in that boufe, with fo much attention ; for all that which you baue feene, that Gold and filuer is caufe thereof, which with fo areat good will you came to fee, and shis is it which is the cause of their troubles , and cares, and not onely it byingeth fuch as you fathe there amaged and allowies, but many others , for they are at this baye the in-Arument of all thele things. Some they put bolune, others they rayle by, whereby they have rule, and bominion in the monlbe . Their mortall men baue pur lo much felleitie in them , that they have and bo procure them , by the loffe of their lynes, and theoding of their bloud, and after they have them, they conferue them with much labour, and with area. ter care keepe them, and with much milery thep fpend them, and with great euill fortune they lole them . Thele are they that cake away quietnelle and reft . They take amave Geape, and many paffe the bay to keepe them , and to insceale their afflictions and cares. In the night allo they med with feare, and care: there are in them to many fnares and hazarbes, as wee fee euery bay.

Burgus. For all this I woulde fee the Golde, the filmer, and the Emeraldes. Doctour. Ellhartmafter Burgus, have you never feene Golde, filmer, and Emeraldes? Burgus. Dea, I have feene them, but in little quantitie. Doctour. Elhat do you thinke is there in feeing of little, or much, but to fee much earth. or little earth, and mother of all michout the profite of man, of as many as nature hath created? And if you have so great defire to fee precious metals? I will carrye you to a place where you shall fee one metall much more of price, of greater estimation, then the golde of filmer y you were so desirous to fee, or better, of more profit

Ina then

The Dialogue of fron

hen the Emeralnes, for that their things concerning fibnes o other shing, but an apinion which men have of them, see have feene very feme wombers that they bo, by amp ng that is unitten of them, except it ber to take money out of one putte, and to concepth it into an other." I know no other bertue that they baue . Ant the Golbe ant Gellaer is no other thing but a bull and earth of that coullour, tobich nature bib breete in the bowels of the earth, as ther bib other metalles . Erneth it is, that the people bane put more ellimation in thele two, then in the reft : in lo much that fuch as have aboundamce of them are called riches and that is called riches, wherof Socrates lapth, that they be no feruice to the tuile man, but to crouble bis mpub, as the long apparell tooth trouble the bodye . And notice feeing thee are come to the boule there the mettall is, that is more prerious then Golbe, Solber, ant Cmeraines, let be goin, for matter Ortuno will gine be leane: the porche of the bome is frethe, and the beate is greate, for bere wee thall palle mell amape a parte of the boate after noone . Ortufo. What Do you lacke mafter Doctour! Doctour. Tilles mould be merry antireff be a little for this your porche of your bose. Ortudo. I am bery glab thereof . Etill it pleafe your worthips to fit bowne, for bere are chayres? Doctour. Maffer Ortufo,the bote after noone is better to paffe in Biskoy, then bere in Semilt. Ortufo. There is al-To beate at this tyme of the yeare, as there is bere, but bere is a bifference, that in thiscitie the boules are mabe berpe well to befente the beate ; aut there the motte parte of the boules are made of boordes, to befenbe the great colbe. and at this tyme of the peace they are berpe bote. It is toell frohen of fuch as fave , that in the &Binter tyme it is good

to bisell in Burgus , and in the Burnmer in Scuill , for because the boules are made to remove and ferue both those

Doctour.

Socrates.

Doctor. And leeing wee are beere , I will theme Baiftet Burgus the metall I promifet bim, which is richer then golbe, filner,on Emeraldes which bee went to fee. B. 3 mould be glat to fee what it is. D. thefe planthes of Fron Iron, shat you fee leaning to thefe walles, is the true mettall moft mecious, which ferneth the world; with it men mofit themfeines in their necefficies: this is the true golbe and filuer. without which wee coulde not live, not men coulde exercyls their artes, and offices without it; and with it are recovered the true riches, all fruites, and temporall goods, and with this mettal al other mettalles are fineb and brought to their perfection. B. Ernth it ie, that you is bery neceffary : but it is a playme thing that golde and filmer are more excellent shen it, and they are bood of a better original fubftance, and of a greater beginning then it, as it appeareth in the fays nelle and excellencie which they bane, more then all other metalis.

D. Maifter Burgus, you fhall baberftande, that all thefe The original? mettalls boe proceede and are ingendred of one maner of The original? fublance,original and beginning. Erneth it is, that there of the metalls baue beene great opinions and biners judgementes among and of w bat the ancient and wyle polilolophers, wheretypon the origin they are innal and beginning thereof thould bee, and whereof they are gendred, ingenbreb. Some boe fap, that moptture congeleb into a certayne forme, is the matter of al metalls. Ariftotle faieth, Ariftotle. of they are ingfores of a bapour entres tuto the bowels of earth. ginning.

The Dialogue of Iron

eginning, an original.

Trimegift. Plinie.

Trimegillo lapoe, that the earth was the mother of the setals, and the bemen the Father. And Plinie fatth thefe morbes. The inner parte of the earth is a thing most precisus, for theo it, and through it boe goe, and pearce all the influences of beauen, ingendying therein thinges of greate paper, as frones and metals: and this is bone, as Calcidonio Platonico boeth lap , by realon of the greate beate that is in the inner parte of it. Califthenes progriftood that Anaxagoras the forme of metals were all one. Anaxagoras and Hermes and Hermes, Tapes, that the metalls hab one forme in the inner parte, and an other in the outwarde parte ane lecret, and an other manifeft,after the manner as the lead bath within it gold, and the gold lead, and to of al the reft of the metals. See you my maifters bothe many and bothe bariable opinions there are among wife men.

Califthenes.

Calcidonio.

A common opinion, Anicen.

Geber. Raymond Arnold.

Chere is another opinion, which is that which is common, and which for the most certayne we boe followe, which Anicen mote in his bookes of Metheurous, and in the bookes bee mate of Alcumifto, which were confirmed by Geber and Raymond Lutlio, and Arnolde de Villa noua, and all the reft that have created of thefe mattere, even buto our tome, bos lay, that the true matter of all metals is ingentoes of brimflone, and quickfliner , the brimflone as the father, and the quickliluer as the mother : and the heat of the brimtione, boeth incorporate, and congele with the quickfiluer, in fuch loste that of thele two thinges are made the metals which are in the bowelles of earth: and of the baciation of thefe two beginninges, they come to biffer the one from the other , and of the purenelle of their smoo beginnings, fome boe come to be more ercellent then other: and for this the golde is more profitable a more fapre then all other metalles, for bycaufe it is formet of his begin. ming, cleane, and pure, which was the cause and originall of his perfection.

And there were Bhilolophers which laid that al installs thould have bin gold, if it bab not bin for the imperfection of the fulphur, and the quickffuer. And at other metals befores the golde, they call imperfect mineralles, bycaufe they had not their purenelle, and concoction, that the gold hab, buth that maruellous friemoftippe, which nature gane buto it. And of this it commeth, that the Alcumiftes for to make golbe, boe pretente to make cleane and purifie thele two beginninges of the which all the metalles are made, and beeing put into their perfection the golde is made by of them , which is the metall most pure and cleane, of all o. Thus they bee moorke with their biftillations and limbecks : and home barbe it is to boe, let them report and fpeake that baue fpent their goods, and allo their patrimonies therebypon, and pet in the end have performed nothing at all.

Such as boe topte againfl them, making impofible their monkes and effectes, boe lay, that in the bowels of the earth, the metals are not ingendred nor made of brimftone, and quickfiluer, as they thinke and holde it for certapne, fo they cannot make of them by arte, for if it were lo, that of brimffone and quickliluer they mere ingenbres, there would be fome rale of them, in the mpnes of golbe, and filner, and of the other metals : for it is feene that there is no figne or bayne of them in any of thole mynes , home beepe to euer thep bee: but rather they are mpnes of themlelmes, as wee fee, that neyther in them are founde metalles , no in the mpnes of the metals are founde fulphur, noy quickeffluer. And if it were fo as they lay that the metalles boe breebe, and are newly ingenozed of their twoo beginnings, it mutt bee of force, that one metall were alreable mabe, and the other thoulde goe a making , for that all coulde not bee mabe alphe: but rather they take out all metalles seaby mabe, and perfectioned, and in the meltinges

The Dialogue of Iron

Folish fat is mate of them, are neither fownte falfar, no guickefiner. The cause is barbe, and the opinions are many, as pout bane beard. I knowe none that bath bit the marke. Bon only knowerb, who gave to nature certaine lawes, and maners to congele, and make thefe mettals, with fuch mixmere and forme as it bath pleased him to be. Dereof it is that forme have beene of opinion, and not without greate realon. that the mettalles were mabe and breb fointly, with the morto, as faint Augustin faveth: Al that ener the Lopb mate be made it together, at one tyme, and he bib create it even fo. when he made the morld, and created the earth, toyntly with it, and in the bowelles of it be created the metalles, and that which is to bee taken for most certaine in this caule, as allo that which poeth thewe most effectes; is the common apint on, which layeth, that the metalles are ingenthet of brime frome, and quickfilmer, for therby are biffolued many boubed. which wonine he harne to beriffe, ifit mere not fo. and this is the best opinion, mod fure, and true, and with the greatest Demonstration. B. Great thinges bath maifter D. hemeb be , for they have put me in abmiration, and I boe baberfrance that his befire is to give be to buberffanbe, the oxigio mal came of twhat the your is ingentpet, leing that his intent is to treate of it, and of his greatnes. D. Erneth it is, that my principal intent in that which I have fapte, is to theme you home the you is made, and created of the lame beginnings, and matter, that the golde and liner are made of, and the reft of the mettales , and that the you boeth not biffer from the golde in more, then the golde is made of his beginminges cleane and pure, whereby it is bright, gliffering, and faire, and the your breamfe it to mabe of groffe beginnings, and not pure, therefore it is foule, blacke, and barke, as wee fee it, and although it bee fo , pet it is more excellent then golbe,op fluer, and al other mentalles, for of fetoce receive more benefice, and bane more need of it, then of all the reft. and al other mettales, without it are of no balte, for it boeth take

take them out, from betterneath the ground, and with terh are wrought and come to their perfection. Ellith it are to fels made, money, and all other thinges which ferue for the ble and profe of mans o in this respect it is of more fireget, then al they are of, fering that it both make them al fubiect, and in fach force boeth grinte and beste them, that all thep Doe come under the toogking thereof, perforce. And before mee paffe further,it wil boe mel that Baifter Ortuho, who was borne in Bifkey , boe tel be howe the you is taken out, mabe, and brought to perfection, and the reft that bee boeth knows thereofifor this being knowen, wee wil lay the matter, with the better foundation. Ortufo. Spaifler Doctos bath fathe fo much buto be, that bee bath bounde mee lykes myle to runne mp rale, and I will fpeake that which I knowe, although that my talke be as of a Bifkayne,

Fol. 146

The Dialogue of Iron

Inwhat thinger from & Steele are fpent.

tall mit bes beelanet, much loffe in che little pour that tref bout bere. D.Eetballe infopmet as long decime wil permil. Ortuño. I mil speake of fome chinges which I boe reniember. One of the chinges in the which you is mod ut, as alfo a greate parte of the fleele, is in armour, as tuel vefenilue, as officialise, la chai chere is no gipce at this bay in the moult where they are not bleb, and exercise, and in many Caunties they are made. Chiefly there is spens much you inmaking of hanogunnes, the sie whereaf is fo much in the marres, and mariske exercises, that the people of greateff fame and actinitie, are they which thoote in them: as a thing bery paincipal, and moit necessary: but furely it toes an immention of the Deutil, fortocarriemamy to bell. And to fpeake of all kinde of weapons which are made of you and fleele, it wil afke a longer tyme, then we bane. The you boeth profite for the tilling of the earth, and labouring of the fieldes, and for the benefites of all the montes in the Countrie , to lowe, and boe other woonker, a thing to necessarie and profitable in all people , feeing that the monkes of the fielbes boeth fuffeine all mannes of effaces, in the moribe. The you ferueth to make builbinges, fo many forces, and biners, that therewith they builbe Citles, Counes, Billages, Fores, Churches, mit publike places, the which wethout gion and freie contoe not be mave, as alfo in the fefences of our manrier of be craftsman, in the witch there are to many necessary fuffrus ments, for to ble, and exercite, that therby you may fee home necellary the you and fleele is, feeing that without the they cannot be mane, not any thing can ber totought. And to er preffe enery office, and feience by it falle, that by meanes of thele two metalles are made and exercises . It will never ber mave an erte of. Due thing I wil fprake with trueth; that there is nothing in the worlde, beeft by it feile done at with the belie of another thing, that bath not need of your and firefe. DE

By meanes of chefe two metals, kinges o princes to ges hingtomes, and cities, e by meanes of them they Do make fubiert their enimies, and bo befende their goods and perfong . And as Linio layeb, that with Tron the countrie is befenbeb,and not with golbe , and with it kings are mabe firong and migheie, and are effeemed and had in great reue. rence. By Iron inflice is kept and maintapned, and by the meanes of it euill toers are chaffened, and the good conferueb. Chie mettall bath fo much authoritie in the moglb, that is conferueth peace and quietneffe in common wealthes, in rities, in feelbes , and in the befertes , in fuch fort that by it in all places they bave all their affurance, and befence : and fomuch map be lapte of that which it can boe, and the great aucthority that it bath, and the meane that it is for al things, that my conque is not able to fpeake them , nor my memory to expresse them. One thing I will lay , that the aumcient Romaines bab by it luch effimation,that onely the noble people onely might weare a ring, o the fame to be of 3ron.

Of two needles which are made of feele I wil fpeake, as The fowing of the greatest thinges that may be thought : the one is the meedle. Meeble with the which they bo fowe : howe necellary it is in the world, in cities, in commes, in common wealthes, in varticular boules, in the feelb, in the Bea, e in al places, pea and to same one particular man alone ' And let fo manye Artes fpeake thereof , that by meanes of the Meenle are b. feb , and bon, and without it, they thould not be bled nor bont and being to mamp, it will be a thing incomprehensible to fpeake of them. Let every man confloer thereof, feeing that from the king buto the theepehearb, and from the bifbop to the feston, they cannot palle without the ble of it, And if me looke what feruice is boeth to women in their bles and crere ciles, in their lowings and markes wrought byon finen cloth and filhe, things lo politike, and velicate, that with the Presole they do worke: Imitating allo, in things which they monke, like buto the worke of nature, making beaffs, birbs,

203 plants.

The Dialogue of from ..

plants, lemes, and flowers, which to feeme with the brand ches, that they gine of lithe in coulours, as if it were she let Same that is growing in the feebe. I fame the picture of the kings mateflie mabe with a neeble fo naturally, as if an excellent painter bab paynteb it. Df all this the necole is the inflrument : a thing fo fmall that it is hib among the fingers . The Indians were in great atmiration thereof at the beginning, when they were first visconered, tohen they Lame Spanyards fowe with a Meeble , for it feemed to them a thing of wonber, and they gave for a Meeble much goibe, and they were alked wherefore they would have them, feeing that they were naked : they amfwered , for the morkes that the Spanpardes old with them, they would have them in their power for a thing of admiration, and with them they tooke out the thornes that can into their feete , better then with any other thing .

The needle for nanigati-

The other Meeble is that which ferueth for Manigatie on to lavle withall in the thea, and is one of the greatell things that beth beene discourted in the whole worlde, within this little tyme: and by meanes thereof, there bane beene found neme morlbes, great kingbomes, and prouinces, ite. uer feene no knowen bnto be. And if the Reeble bab not bene found they had neuer bin biscougred. Elben they trans ten ir, the natigation was bery little, and Gogt: they laylen onely calling about by the bankes of the Ges coalles : and nowe by the meanes of it, they bo inquite them felues , and ba laple in luch logt, that the thippe called the Clictorie lap. led all the rounde monlbe ouer, as the Soume goeth energe bay, that it is laybe, thee layled at one time thelue thoufante leagues. Ant that which is more to be meruetlet at, that the thippe being in a guiffe of 800. or 1000, leagues, by meanes of the Mable they came coahe parte which they pretenen en go bato, without any other knowledge, more the by the meanes of the Meeble, of as the cal it the compatte,

he which is of feele: and they to rubbe ouer one parte of it with the love Rone, and forthwith by particular bertue tobich Bos bath ginen buto it by that parte which thep bib rubbe other with the love flone, it looketh towardes the Bole, which is neare to the Morth , and perpetually it boeth this being in the Sea,o) on the land, eyther by the bay, o) by the night, with the Sunne on without it, almayes it looketh tomarbes the Month Wich the which Meeble, and with the carbe of Manigation, wherein is placed a biffinction for the know lenge of the wynnes, and the pefeription of the postes, they layle lo many milleons of leagues, as at this bay tree fee: and it is bone lo ealily ,that it is bery monderfull. The inut. " ho faft tion of this maruelous Meeble was founde by a Partiner, feund this toho was borne in the citte of Melfi in Italy. Alfo the Tron a needle. Steele bo ferue to make clockes, which is a thing of greate art, & berp neceffary to line th rule @ oaber : fog by them thall be knowe the works that are to be made, a the time that that be fpent in them, they ferue for all flates of people , whereby they may live wifely a diferetely: a where is no clocke they line like beafts. they are made at this bay with fo much art o curiouinelle, that they make great abmiration, they purifie and make cleane thele two metals , that they make them as bright as any other :they gold them, they filuer them, othere is given to them other coulors, ? are made very fayze, as we fee that there are made chepnes of Sceele very belicate and fyne: and there are ginen to them opuerle Capes and coulours, and are more effeemed then thole which are mabe of Color on Sther . Chefe metals are billilled by the waye Diffilled. of Alcumide : and there is mabe of them Quinta effencia, es of Golbeand Silver. The Alcumilles Doe lave, that the metall mothe apre for their caules and effectes, is the Gron .

Che Tron boeth fuffer a grienous bifeale , mbirt bocch confume and make an ende of it , which is called Rull,

0

10

The Dialogue of from

That ruff

Remodies when the suff hath sakenit.

rull, and because it may not come to it, there are many re medies, that the things which are made of Iron., and of Occele may be continually cleane : principally, that they bee put face no mord place, and that they be occupyed and bleb, gilbing them of illusting them : in fo boing they be hepte cleane from the aforelaybe ruft , or announting them with common ople, or with the marrowe of a Deare, or with the fact of birbes, on with white lead and bineger, when they are taken with the ruft, for to take it away , they muft be fis led of, and per inco bineger , and after into the fire, for mich chist istaken away , bnieffe when they be fo much eaten, that they are not to be remembed with thefe benefites. I boe not fpeake of the finelle and beligatenelle that there is in forering of it, and cloting of it together, and of the bling of it in the forge , because I am mery Tiet it paffe, with many other things that I thould lay thereof, and bo conclute, that thele two things, Iron and Soccele are the mothe necellarpe things for the feruice of ma, of as many as are in the month. Doctour. I am bery glab with that which matter Ortubo bachfooken: for all is to confirme the excellencies, & greatneffe which I have buberfloode of thele two mettales, where by I bo take them to be more necellarpe then the golve and filuer,if we no confiner well of it. The golbe noth not fetue be principally for any other thing, but for money, which is to buy any thing therewith, and for the trate of things , the tobich any other metall might ferue, on any other thing. For in the oldetyme as there was no money, they bio batter and change one thing for another : and by reafon in this barte. sing and changing there could not be bleb any equalitie and infilication betweene parties; the wile and bilcreete men of common wealthes bib agree together to make a thing. which might ferue the lacke that might be of the one partre to the other , that with it the thinges might be mabe equall, and there might be a inftification of both partes . And for his realon and effect, there was inmented and made the firft money,

many, topich mas neither of golde not lituer, but of your and of metall, as wee fee in the mony of old tyme. and after that, the Romannes made it of golbe and filuer, for the fappe nelle thereof, but it is fufficient that the firfte which was mabe , was of you and of metall, feeing that the Tholans bane it to this bap, of fruites of trees, and efpecially of the Cacao, which is the fruite of a tree, lyke to an Almond, this Money male bath ferued, and boeth ferue them for money, to buy, and to fell, and to ble all playnette, in their buyinette. And in all of frante of Gines the blacke people called Negros hoe need for money. Ginea the blacke people called Negros boe ble for money, for the fame effect, certayne little fnaples, which they finde in the Dea, as allo other nations Doe ble of thinges lyke to B. I baue beibe my peace, barkening to your moonthippes, with greate attention , and furely you have treated inchinges of greate importance, and of greate learming: and feeing you goe treating fo effectually the matter of yon, and la belicately, and with lo greate learning, I worde that Patiter Doctor might latifile be one thing. that I have feene verybed of learnes men , bybon the complection of year: top forme voe fay it is colve, ambppon this I have had to many alterations, that they have amaled me, and feeing that Baptler Doctor can certifie be concerning this matter, wee thall take greate pleafure, if that bee will beclare it buto bs. D. I thought to batte made an enbe with this laying, and that I had accomplished my promise with Spatter Burgus ; but nome bee will bypue mee to a queftion,che moft fiarde and bifficulte that is in al philicke, and furely it were neede of more tyme, then that wer have to betermine it.

B. Pour mooghip may not escape by that meanes, for to morrote you may make an ente of that , which you cannot boe this bay, Ortuno. I thal teceine great pleafure in it, although it bee not mp profestion: for beeing a thing touching pron, I chal reiopce therein. D. for to content pou, I wil

any langer of chemibut fering that it fermeth good to Palther Docum that I handre (peaks of the preparing of their
metalles, I will not it, special: I woulde the same thing as
well for my parte. But if Paister Docum woulde take
paymen, her might speaks thereof, as well as most men that
we in the west., seeing be innoverhit, and that there is nothing in movicine bottom boso bins, but seeing that wer have
of him a good Censou, some bins, but seeing that wer have
and supply it. The metalles if they her not corrected and
proposite mery man, as it is convenient for them, cannot
form in movicing and works the effects and become, in thick
they have in those a bycouse they are goods of substance,
and strong. The Alexantites have known and no known
much in correcting and preparing of their, seeing that wer
for they bit the goide and the stane, in trooby, that they may
be dynake, and not reduce them into positions as also they no
the bile to the best and copper, and of other intervals and
metalls, which they not copper, and of other intervals and
they see property; that they may serve in medicine.

They because and prepare particularly the year for this effect, but with greate difference, from all other mendles and Malcalin Chemeth very learnedly, being a Philipp, and a Malcalin Chemeth very learnedly, being a Philipp, and a Malcalin Chemeth very learnedly, being a Philipp and the product the country decided passers who thing of the point which is that year, woulf her sakers to chem other uniquies, for if it bee mingles with Copper, or Leas on Glade, and if it bee gives is mingles easily perform for to unique, it will all them, you may take the quantity you lift, of that which is there, you may take the quantity you lift, of that which is there, you may take the quantity you lift. If the labels have not put, and put, it take haber, and alter he put is followed; and put, it takes force thing, in that the put is his force, and put, it takes force thing, in that the put in the force of the force of the put is the sake it for they been a great the fault. This manner to make colactaich the agre bath many in. The harte to commences, became the ayie is a finbeil element fubicet to tocoole in the any maner of alteration and expruption; and therefore it may arre. he infected with fome suill qualicle, eafilys being infected, it may infect the mater that fo is mane coine, infuling ther-into his malice. The which Anicen flewed hery wel in the fecond of the first faying, The ayre is an entil thing, by reason it is mingled with entil thinges, as Clapors, and finelles, and entil thinks, chiefly that which is put in betweene cue walles , and efpecially that which paffeth by places where are rotten tolantes . and naughty Erees , and tubere bean booles are , for it altereth at every one of thefe thinges. and of opens recoises than entil quality. And toy this saule the maitient fotillations ben fagbin that in cinte of the plague the mater faulte noche put into the apre to bee made colbe, becaufe the corrupt apres thoule merintect it. Chere is like. trife an other inconnenience, that you cannot cuery night fet the meter too bee made colde in the Appe , for fome nights and the mote paste of them , in the Summer time are to tajot , that not unity the eyes booth not make colne, but the mater that is fer in the apre, is whotter then it was before, and if it bee made any whit colde, it bureth no longer then the Moming, toben it is not neebefull, and likewife in the time betweeene Calinter and Gommet . op in the Minter toben the apre moulbe make coloe , then the rapne, the tempettes and cloudes and other alteractons will not fulfer the appe to boe it. All thefe thinges experience boeth theme at this bay .

There is an other manner of may bow to make colo with the ayer, which is the most wholefome, and more without twee then any of all the other : wherein there is no occasion of any cull qualitie. And there are many people of estimation which boevle this may to make coive that, which they foulb oginke,

Foi.165

The Dialogue of Snow

withe, the which they put into bellels of earth, or metalls, and be alwayes make winde and ayre to the bellels with a mer tomen cloth. And it must be for that it be in the arre continually michout cealing, as long as you are at meate. And in this lorge it will be made calle to purpole y, and the bate appe that is topned to the bellell is taken aware, and in place of it commet freihe and colbe appe , even as it boeth whenthere is gathered winde to the face, and taking amay the back appe that is toyned to it, and with frethe appe Ebe weber impe te make cobe, is in a toell, toberein

shereof.

The fecond they no put the tellela with maner on toine, and there they manner home remayme the matte parts of the days. This knows of making color hath allo many inconneniences, as well of which sim the parts of the mater, where with it is made color, as of the parts of the place where it is put, sheefely in the melles bure that of the rices and money, that log the molte parts are foinic and full of fitchingle. The mater of these welles is an other of the melles is an other o earthly mater, groffe and barbe , because it is continually Remaing in one place , and that within the howels of the partities, for that the hearnes of the Burne to not peares it, not per the aype neeth villet it , and therefore continualty this full afemil bayours, tobereof they bo eafily rott, and they are foule waters full of burte and claye, and of other milebieles of an enill qualitie.

In Aut fering the mater or wine in fount a long tyme into this foule denbing water , what can come offe, but that ft participateth of the culliqualitie that it bath ! And fo Galen lapeth , that the bellell which mult be put into the weil , ought to bes fult : for if is locke of his fulnelle , then the mater of the well batch penetrate it, of the bapour of it good into that which is emptie a and therefore it is cou-

Gaten.

Of the Snowle, has

Plinie.

The Romanes bit ble it musty and to Pilnie in the gr. books of his history latth, that Nero was the first shat love wasters, to cook it in themore. The which Galen in the fements of his Alebody backrecits of him, laying, Nero was the first that love the waters, and afterwards cooks them with dename : ing the water being mane coine in this linte, receiveth manequickly the color, and more effectually. And it is a mater more healthfull, for by the feething of it, is aworden the earthly parter from the mater, and it remained mape fubrile, and nime thin, and to is befreubeth moje fpos Dily from the flomacke .

Pluie.

Plinie in his naturall historie, in the nineteenth booke, complayment of the case that their of his cime has , in herping the Course of the Ellister , for the bote weather in Summer, laying, that they his onershow the man by keeping the lipture from warms weather, makin permert the oper of meters , that in the monthes which are that the curioficie of the people is to much that at that time, there is feely about tance of factor, as in the monthes in the match there boeth partically fal byon the grounds great qua-city obsered. This Plinic fateth, for in his tyme and after, is hand a common thing to heepe the fants of the minter, for the farmer . Heliogabalo Emperous has make a great came in a litte mountapne, from a garben of bis eune, lebere bee gatheren in the minter bery greate quantitie of finame.byine ging it from the mountaines that were nierell, so Rome,

Beliogabalo,

Cheres Miliainens.

Chares Milicineus, in the billupe that bee unperth of Ring Alexander fapeth, that in the Citte of Petra, a molt mondous Citie in Alia, there was, appinitify there caues, tinthe winter tyme were fillen with fonome, for the ot meether, for the fernice of Alexander, o fuch as mere

Estaputts to bint.

At this bay it is time, not onely in Asia, but all in Suowe is kept many parties of Africa, and in all Europe, chiefly in all the by many per-Countries which are under the dominions of the greate ple.

Enthe, and especially in Constantinople, where the finitude is so inuch used, that all the peers it is solve in yuddithe market, and they vie of it all the peers. The lette fame is done at this day in all the states of Almanie and of Flanneirs, Hungary, and Bohemia, and other places, where they keepe the Gnowe, in houses, and bannes in the Colonier, for to make their drinks colonier the familier.

They carry from Flaunders to Paris, the water that is frofen, which is muse then thee fcose leages bistaince. Lykewyfe in our country of Castile it is kept in houses, and they gather it in the toineer: and when winner is post, they conferve it for the whose weather. And there are many Lordes and great men, which have in the mountagues particular houses, where they commande that is heep ut in the winner, for this effect: and many of them now decis, and not make colde theretoith as well in the holder, as in the faunter, as there are chiefly in Castile in the growe of winner, waters that are most colde.

They which drinks that which is made colde with The colde knowe, laye that it booth not offende them, an that which is which doorly made cold with the weather, for it is lesse that a cuppe of proceede of colde water beeing Dooks, that comment househ of a well, or Snowe, doorly of a colde fountayne, burtesh luch as doe brinks it, and brin-wor offend as king that which is made colde with laots, they feele no luch orber colde burte.

I not much marvell at one thing, that this Citie How careles of Simil beeing one of the most famous of the Module, people are subsected always have liked many greate personages of that they bery high estate, and many people of greate estimation as have not had well of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country, as strangers, Snowe in Samuell of the natural people of the Country of the natural people of the Country of the Country of the natural people of the na

Of the Snowe

the time of what weather for to make coibe that which they brinke, leeying that the beate of this countrie from the beginning of themmer, butilit be well never issuances the waters are most whoc, that it is not to be full never issuances the waters are most whoc, that it is not to be full never, and all the waters are most whoc, that they cannot scarcely be bunke. And besides that the moste parte of the people of this Citie are people of much business and cares. And seeping that the Countrie so whot where businesse and cares due abounds where the mater is whot, and nothing wherewithall to coole it; with instance is to the contribution, seeping that the colonesse that see have layb, and it doch make the benefites which Galen and Anicea have sheved unto bs.

1574

To the excellent Lord the Earle of Barajas affiftent Fol.172 of the citie of Sendl Sec. the Doctor Monardes your Philippine wifeeth beath.

Oft excellent Lorde, the faire & white fnow doeth complaine vnto mee, faying: that the being so auncient, and of so many ages, celebrated of so many Princes, Kinges, wife and valiant men, and beyng had in so greate estimation and price, that with greate care they

fecke after her, & with greater care they doe conserve her, for to geue health & contentment to all persons : yet for all this, many people with little confideration, & not knowing what they lay, doe perfecute ber, putting undecent names to her; and that which doeth most greeve her is, that some Phisitions, either for ignorace, or for malice, do speak euil of her, not perceiuing what so many lerned me have treated & faid of the great villity & profit, which the doth to many as experience doth thew, & all people doe anderstand, chiefly when they doe drinke their drink most cold with the benefit which doth remains to them theseof they do praise & eatol her. Moreover the faith, that the forceth no perioto vie her: but if any wil vie her, thee can gene such order & maner to make cold the drinke as is co which enery one would have, & which docth bell apper-tays to them, & this with all affurance with onely leauing or placing the westel wherein the drinks is joyned nere to her, the which none of the olde writers nor of the late did feesle against, or forbid. And especially let this maner of making cold met be done with lunking water of a well, nor with the most burning Salepezer, but with pure water beyong cleane and cleare. These coplaintes do many other the faire lillie white Snow hath watered water me, & in the end the laftly faide to me, that fince that I had prayled her fo much, and taken in hande to favour her, that I should Alfiq 3d Parajes alliffent Fol.172

also seek her some one person wife and discrete, that with worthines & greatnes might valiantly succour & defende her from his adverfaries. And feeing the great reason that the hath, & the bondage that I am in for the preferuation of her honour, feeking in all this realme who might do it. Thanenor founde who hath the parces that this faire Lady Snow defireth, & who with most just title may do it fo well'as your most excellent Lordship. And that your Lordthip may understand the rights which she hath, I doe offer & ferneyou with this treatie, that of her & of her greatethes I have written being amended & added therevato, of that which before was writte. Wherty your Lording, lesing it may the better defend her coule and this shall not be Hard to your Lordhip, feeing that it hath byn forafic too you that which did feeme impossible, that is, having take out mighty rivers of dry fieldes, & placed formany & for faire foundaires made with formed are by all parts of this other which were for necessary, & where there was a Lake without profit, it now made the fieldes of this & faire places full of trees which identifiere for the recreations and walks of our citizens and as one most worthy which doeth followe the Romanesin their works hath brought to light the antiquity of this citie patting the coloniums that fo many occion liable by necessity his and buried in a place now to publike decked and adorned as the antiquities of greatrielle doeth defence wherey that at people may enloy of a remembrance to everlatting, the which how harde and labortome in trath beene, the impossibility the the worke had, digit there. And to the faire Ladie Snor is in great hope of trust that haning friche a noble proceed or the first had be defended in early tongues, so that the that be taken to the fame estimation that her works to greaters doe nightly delense, if wo at some sufficient fac
